Neuroimaging in Epilepsy Gregory Cascino, Clifford R. Jack, 1996 A practical and well illustrated text on the techniques and procedures used in imaging in patients with epilepsy There exists no other textbook devoted solely to this topic The value of neuroimaging in patients with seizures is great Patients with partial or focal restricted to a certain portion of the brain require CT or MRI scans to determine whether a brain lesion is associated with the epilepsy PET scans help to elucidate some of the metabolic changes that occur during seizures Evaluation and management of patients with epilepsy now routinely incorporate imaging techniques whether or not the patient undergoes surgery Drs Cascino and Jack have edited a highly illustrated and authoritative text on the topic They have enlisted internationally known authors from the US Canada England and Australia In addition the book is being published under the auspices of the Mayo Foundation

Imaging Biomarkers in Epilepsy Andrea Bernasconi, Neda Bernasconi, Matthias Koepp, 2019-01-10 Assembles world class expertise on clinical and molecular imaging derived biomarkers presenting neuroimaging in epilepsy in a broad neuroscientific context

Magnetic Resonance in Epilepsy Ruben Kuzniecky, Graeme D. Jackson, 2005 Remarkable advances in imaging have increased the importance of MRI for diagnostic treatment and management of epilepsy Neuroimaging of patients with epilepsy no longer simply deals with the technology and interpretation of images but also with issues of brain metabolism energetics cognition and brain dysfunction The first edition of Magnetic Resonance in Epilepsy came into clinical practice in 1995 with a revolutionary idea that is MR is as important as EEG in the clinical management of patients with epilepsy The second edition of Magnetic Resonance in Epilepsy the only comprehensive text in the field of epilepsy neuroimaging reviews fundamental concepts and new advances in MR technology computerized analysis MR spectroscopy DWI and other neuroimaging techniques such as PET SPECT and MEG application to the study of patients with epileptic disorders Provides a crucial update of recent advances in imaging techniques Timely publication as subject of neuroimaging is a very hot area in both clinical epilepsy and basic neuroscience research Editors are well respected in this field

Neuroimaging of Epilepsy Lorenzo Caciagli, 2019 Epilepsy is a common neurological disorder complicated by cognitive and psycho social comorbidities Magnetic resonance imaging MRI investigations characterise brain networks in vivo providing measurable traits biomarkers of pathological processes with biological validity and high reproducibility thereby shedding light on the pathological mechanisms of epilepsy and its comorbidities In this PhD thesis functional and structural MRI have been employed to detect potential biomarkers in relation to three specific domains of epilepsy 1 disease severity in temporal lobe epilepsy TLE 2 cognitive network dysfunction in frontal lobe epilepsy FLE and 3 heritable phenotypes endophenotypes in the prototypical generalised epilepsy syndrome juvenile myoclonic epilepsy JME The first project focused on determinants of disease severity in TLE a disease progression and b secondary generalised focal to bilateral tonic clonic seizures In Study 1 I applied a meta

analytical approach on previous structural MRI studies in TLE n 1500 providing comprehensive evidence for hippocampal and extra hippocampal cumulative atrophy In Study 2 I captured functional MRI fMRI markers of secondarily generalised tonic clonic seizures in TLE identifying abnormal activation task modulated connectivity and network based centrality of the thalamus The second project investigated the neural correlates of cognitive dysfunction in FLE Using neuropsychometry and four fMRI tasks addressing working memory and expressive language I detected derangements of fronto temporo parietal activation independent of seizure focus lateralisation and impaired deactivation of task negative networks The third project investigated patients with JME and their unaffected siblings to identify imaging endophenotypes of JME i e heritable traits associated with the disease at the population level co segregating in families with affected members Study 1 validated indicators of motor system activation during language and episodic memory fMRI as suitable endophenotypes Study 2 investigated structure and function of the mesiotemporal lobe showing abnormalities of hippocampal morphometry common to patients and siblings and associated with reorganisation of memory fMRI activation implying prenatal neurodevelopmental mechanisms
