Hormones in Neurodegeneration, Neuroprotection, and Neurogenesis Achille G. Gravanis, Synthia H. Mellon, 2011-06-24 As life expectancy increases and population ages the already enormous impact of neurodegeneration on society will become even larger without better prevention and treatment Developing strategies to prevent degeneration of neurons and to promote a healthy nervous system is thus critical The development of pharmacological agents that would increase production of new neurons was recently facilitated by the identification of the hormonal regulators of various steps of adult neurogenesis The proposed book is written by a group of top world experts involved in the study of the mechanisms of hormonal control of brain damage and repair The effects of thyroid and steroid hormones estrogens androgens progestins glucocorticoids various neurosteroids or polypeptide hormones CRF urocortins somatostatin GH IGF leptin prolactin PACAP erythropoietin on neuronal survival and neurogenesis in various neurodegenerative conditions and in brain aging will be discussed in detail The proposed book is unique because it gives a comprehensive account of the neuroprotective and neurogenic effects of steroid and polypeptide hormones Furthermore new pharmacological approaches for treatment of neurodegenerative conditions are presented based on the neuroprotective and neurogenic properties of natural and synthetic hormones

Neurodegeneration L. Miguel Martins, Samantha Loh, 2012-04-11 Currently the human population is on a collision course for a social and economic burden As a consequence of changing demographics and an increase in human individuals over the age of 60 age related neurodegenerative disorders are likely to become more prevalent It is therefore essential to increase our understanding of such neurodegenerative disorders in order to be more pro active in managing these diseases processes The focus of this book is to provide a snapshot of recent advancements in the understanding of basic biological processes that modulate the onset and progression of neurodegenerative processes This is tackled at the molecular cellular and whole organism level We hope that some of the recent discoveries outlined in this book will help to better define the basic biological mechanisms behind neurodegenerative processes and in the long term help in the development of novel therapeutic approaches

Progress in Neuropeptide Research Elizabeth P. Farley, 2007 The explosion of research activity in the field of neuropeptides has led to the identification of numerous naturally occurring endogenous peptides which act as neurotransmitters neuromodulators or trophic factors to mediate nervous system functions Increasing numbers of non peptide ligands of neuropeptide receptors have been developed which act as agonists or antagonists in peptidergic systems The scope of this new and important book includes gene regulation of peptide expression peptide receptor subtypes transgenic and knockout mice with mutations in genes for neuropeptides and peptide receptors neuroanatomy physiology behaviour neurotrophic factors preclinical drug evaluation clinical studies and clinical trials

risk factors symptoms pathogenesis biomarkers and the potential treatments of neurological disorders The comprehensive information in this monograph may not only help in early detection of various neurological disorders but will also promote the discovery of new drugs Provides a comprehensive overview of the molecular aspects of neurodegeneration neuroprotection and neuro regeneration along with therapeutic strategies for various types of neurological disorders Provides cutting edge research information on the signal transduction processes associated with the neurochemistry of neurological disorders Discusses risk factors symptoms pathogenesis biomarkers and the potential for treatments of neurological disorders

Advances in Research on Neurodegeneration P. Riederer,D.B. Calne,R. Horowski,Y. Mizuno,W. Poewe,M.B.H. Youdim,2013-03-09 Volume 5 of the series Advances in Research on Neurodegeneration is concerned with themes which are currently the focus of intensive research and in which advances in our understanding of the pathological mechanisms underlying neurodegenerative diseases are expected in the near future The first section contains five reviews devoted to the various neuroimaging technologies The discussion is concerned with the question of whether neuroimaging techniques make it possible to follow the process of degeneration as it occurs and which methods offer the required sensitivity and quantifiability for this purpose However the question needs to be examined of whether given the physical and chemical limitations of these techniques even under optimal conditions anatomical resolution can be improved to the extent that neuro degenerative diseases can be diagnosed earlier than currently possible and a confident diagnosis made The possibilities of using neuroimaging techniques to provide information regarding the effects of neuroprotective or neuroregenerative therapeutic strategies and for correlating the results of neuropsychological research with imaging data are also discussed The second section is concerned with the significance of endogenous or exogenous neurotoxins as triggers for neurodegenerative processes that may lead to Parkinsonism Vulnerability factors which include such factors as nerve ending sensitivity the synergistic effects of drugs and the various mechanisms underlying different toxins are discussed
