Ocean Politics And Policy Ocean Politics And Policy:

Making Ocean Policy Francis W. Hoole, 2019-03-12 Written in response to the increasing interest in the making of ocean policy this collection of original articles surveys the history of U S ocean policy ocean policy advocacy and the struggle within government to determine how best to develop and implement a sensible ocean policy The increasing complexity of the issues programs and policies related to marine and coastal zone matters and the increasing number of government agencies and interest groups formed to deal with these matters reflect the growing awareness of their importance But reflect the editors in an enormously complex world where many interests are in conflict and where information is tentative and incomplete yet often overwhelmingly abundant there are few easy solutions to ocean policy problems **Climate Change and Ocean Governance** Paul G. Harris, 2019-02-21 Offers a multidisciplinary edited volume on policy dimensions of climate change for the world s oceans for researchers policymakers and activists Perspectives on Ocean Policy, 1975

Perspectives on Ocean Policy National Science Foundation (U.S.), 1975 *Ocean Politics and Policy* Peter J. Jacques, Zachary A. Smith, 2003-04-15 A sweeping overview of the problems politics and policies of international and domestic management of the world s oceans The world ocean is one of the most important global resources Without it most life on earth would not survive because the ocean provides temperature regulation and produces oxygen among other vital functions However this life sustaining resource faces dangerous threats from over fishing industrial wastes oil pollution and loss of biodiversity Ocean Politics and Policy covers the major types of pollution deep sea bed mining international jurisdictional disputes and piracy examining the underlying reasons for these problems and providing practical policy suggestions for reducing their impact Special focus is placed on historical and contemporary ocean laws from the concept of freedom of the seas to the 2001 Fishery Stock Agreement Solving the problems facing the world ocean should be a high priority for the international community and this book provides a starting place for this process United States Congressional Serial Set, Serial No. 14862, Senate Documents Nos. 12-13, **Monthly Catalog of United States Government Publications**, 2004

Japan And The New Ocean Regime Robert L. Friedheim, 2019-02-22 The regime under which humankind has governed its uses of the ocean is in the process of change shifting away from the traditional freedom of the seas toward a mixed system in which most of the valuable near shore resources come under coastal jurisdiction The transition to a new regime has been difficult for many states most notably Japan whose rights to use the entire ocean were well protected by the traditional regime Japan s response to the need to develop a modern ocean policy to adapt to the emerging ocean management regime is the subject of this multiauthor volume U S and Japanese scholars look at what Japan is doing how and with what results They first assess general trends in ocean management then examine the role of Japan in the international political economy of the oceans and finally look at Japan s ocean policy in various sectors shipbuilding fisheries mineral resources offshore petroleum and nuclear power generation Given Japan s importance in ocean affairs the authors point out that the lessons that can be

learned from its experience are of prime international importance *Economics of the Oceans* Paul Hallwood, 2014-02-03 It is an unfortunate truth that our oceans offer valuable resources that are too often used unsustainably Time and again this is due to the failure of international law to provide a framework for adequate governance *Economics of the Oceans* examines this issue and provides a comprehensive study of ocean uses from the perspectives of law and economics Themes covered in the book include ocean governance the economics of oceanic resource exploitation offshore oil coral reefs shipwrecks and maritime piracy Analytical techniques such as basic game theory environmental economics of the commons and cost benefit analysis are employed to illuminate the topics This book will be of interest to students of environmental economics natural resource economics and management and the economics of international law as relating to the oceans **Reorganizing the Federal Effort in Oceanic and Atmospheric Affairs** United States. House of Commons. Select Committee on Science and Technology, 2007-10-18 Ocean processes are fundamental to climate and weather patterns across the world they provide minerals foods and chemicals as well as being major energy resources both hydrocarbons and renewables Oceans also provide services in the form of transport trade communications and recreation as well as services through the maintenance of biological and landscape diversity the importance of which may only be fully appreciated by future generations For all these reasons the Committee's report finds that despite the impressive research efforts of UK institutions and individual scientists oceans need to be monitored and studied more thoroughly than has been the case up to now with better co ordination of activities and increased overall levels of funding The Committee's central recommendation is that there should be a new marine science agency replacing the current inter agency co ordinating committee with a remit to co ordinate marine science throughout the UK promoting marine science education in schools universities and to the wider public Overall responsibility for the UK's marine science strategy should be invested in a designated minister within Defra The new agency should undertake a strategy to tackle skills shortages in marine science and technology engaging with industry and facilitating UK involvement in international organisations as well as co ordinating ocean monitoring and observations Another key task will be to ensure the balance of research effort between the different strands within marine science and between the crucial polar regions with a greater focus in the Arctic albeit not at the expense of the work conducted by the British Antarctic Survey Concerns are raised over the research vessel capacity available to UK scientists provided by NERC especially for coastal research and with regards to the adequacy of Defra's plans to establish marine
