## **Ocean Reflections On A Century Of Exploration:**

**Ocean** Wolfgang H. Berger, 2009 It would appear that Wolf Berger has read just about everything ever written in the technical and popular literature about oceanography ocean life ocean geology ocean history the ocean s past and the ocean s future With Elizabeth Shor Berger has combined this unbelievable reading list with his own prescient observations to create an accurate inclusive fascinating and remarkably readable volume I applaud their dedication diligence and dexterity Richard Ellis author of *Men and Whales Great White Shark and The Empty Ocean* **Ocean** Wolfgang Helmut Berger, 2007\*

*Oceans and Oceanography* John P. Rafferty Associate Editor, Earth Sciences, 2011-01-15 Constituting more than 70 percent of Earths surface the worlds oceans are so vast as to remain something of an enigma to this day Navigating these imposing seas and unlocking their secrets is the calling of oceanographers Their research helps determine what climatic geologic and chemical impact oceans have on a variety of organisms In spite of their magnitude and might the worlds oceans are not immune to the effects of adverse human activity such as pollution This volume surveys this huge but fragile ecosystem and the individuals who help fight for the preservation of this vital resource that has critical significance to all earthly life **The Sea Floor** Eugen Seibold, Wolfgang Berger, 2017-05-29 This textbook deals with the most important items in Marine Geology including some pioneer work The list of topics has grown greatly in the last few decades beyond the items identified by Eugen Seibold as central and now includes prominently such things as methane and climate change that is the carbon cycle and the Earth system as a whole Relevant geophysical geochemical sedimentological and paleontological methods are shortly described They should allow the reader to comment on new results about plate tectonics marine sedimentation from the coasts to the deep sea climatological aspects paleoceanology and the use of the sea floor The text tries to transmit to the reader excitement of marine geological research both aboard and in modern laboratories Basic mineralogical geochemical biological and other relevant data and a detailed list of books and symposia are given in an Appendix This Introduction builds on the third edition of *The Sea Floor* by E Seibold and W H Berger While much of the original text was written by Seibold a considerable portion of the material presented in this edition is new taking into account the recent great shift in marine geological research some of it with great relevance to human concerns arising in a rapidly changing world **The Abyss Stares Back** Stacy Alaimo, 2025-05-13 In an era of accelerating extinctions what does it mean to discover thousands of new species in the deep sea As we see the catastrophic effects of the Anthropocene proliferate advanced technologies also grant us greater access to the furthest reaches of the world s oceans facilitating the discovery of countless new species Sorting through the implications of this strange paradox Stacy Alaimo explores the influence this newfound intimacy with the deep sea might have on our broader relationship to the nonhuman world While many images of these abyssal creatures circulate as shallow clickbait aesthetic representations can be enticing lures for speculating about their lives profoundly expanding our environmental concern *The Abyss Stares Back* analyzes a diverse range of scientific

literary and artistic accounts of deep sea exploration including work from the naturalist William Beebe and the artist Else Bostelmann as well as results of the Census of Marine Life that began at the turn of the twenty first century As she focuses on oft overlooked creatures of the deep such as tubeworms hatchetfish siphonophores and cephalopods which are typically cast as alien Alaimo shows how depictions of the deep seas have been enmeshed in long colonial histories and racist constructions of a threatening abyss Drawing on feminist environmentalism posthumanism science and technology studies and Indigenous and non Western perspectives Alaimo details how our understanding of science is fundamentally altered by aesthetic encounters with these otherworldly life forms She argues that although the deep sea is often thought of as a lifeless void with little connection to human existence our increasing devastation of this realm underscores our ethical obligation to protect the biodiverse life in the depths When the abyss stares back it demands recognition

Squid in Transatlantic Culture Otto Latva, 2023-09-30 This book builds upon the extensive study of the historical relationship between sea animals and humans in transatlantic culture during the eighteenth and nineteenth centuries It exposes the present understanding of the human relationship with the giant squid not only as too simplistic but also as historically inaccurate For instance it redefines the earlier understanding that humans and especially seafarers have understood giant squid as horror evoking and ugly creatures since the dawn of history and explains the origins of mythical sea monsters such as the Kraken The book is however more than a critical response to previous work It will point out that animals such as cephalopods which have largely been defined in biological contexts in recent times have a fascinating and multivariate past entangled with the history of humans in many remarkable ways Hence this book is not just about perceptions of giant sized squid or cephalopods but a historical inquiry into the transatlantic culture from the late eighteenth century to the turn of the twentieth century It will provide new knowledge about the history of mollusc studies seafaring culture and more broadly of the relationship between humans and animals during the period

*Southern Limestones under Western Eyes* Brian McGowran, 2023-09-05 Science the growth of reliable knowledge became a major triumph of the European Enlightenment in the seventeenth century under the guise of natural philosophy investigating what the earth and universe are made of and how things work It took another century for the parallel subject natural history to glimpse how the earth its geography and its richly diverse life came to be Later geology and biology became intertwined as biogeohistory an ever changing environmental theatre hosting an ever changing evolutionary play This environmental theatre has shifted with the making and breaking of supercontinents the birth and death of global oceans and the rise and fall of global hothouses and ice ages The evolutionary play begins with biostratigraphy wherein fossils revealed deep time and ancient environments and built the first meaningful geological timescale and ends with the still young science of palaeoceanography central to which are microfossils rich in information about the oceans and climates of the past In *Southern Limestones under Western Eyes* Brian McGowran recounts the history of biogeohistory itself the ever changing perceptions of rocks fossils and landscapes from the late 1600s to the present McGowran's focus is southern
