Although this book is highly comprehensive, it is suitable for beginners; there is a chapter on Astronomy Basics and experts alike. Celestron's NexStar telescopes were introduced in 1999, beginning with their first computer-controlled go-to model, a 5 inch. More models appeared in quick succession, and Celestron's new range made it one of the two dominant manufacturers of affordable go-to telescopes.

**A Computer-Assisted Analysis System for Mathematical Programming Models and Solutions** H.J. Greenberg, 2012-12-06 Welcome to ANALYZE, designed to provide computer assistance for analyzing linear programs and their solutions. Chapter 1 gives an overview of ANALYZE and how to install it. It also describes how to get started and how to obtain further documentation and help on-line. Chapter 2 reviews the forms of linear programming models and describes the syntax of a model. One of the routine but important functions of ANALYZE is to enable convenient access to rows and columns in the matrix by conditional delineation. Chapter 3 illustrates simple queries like DISPLAY LIST and PICTURE. This chapter also introduces the SUBMAT command level to define any submatrix by an arbitrary sequence of additions, deletions, and reversals. Syntactic explanations and a schema view are also illustrated. Chapter 4 goes through some elementary exercises to demonstrate computer-assisted

analysis and introduce additional conventions of the ANALYZE language. Besides simple queries it demonstrates the INTERPRT command which automates the analysis process and gives English explanations of results. The last 2 exercises are diagnoses of elementary infeasible instances of a particular model. Chapter 5 progresses to some advanced uses of ANALYZE. The first is blocking to obtain macro views of the model and for finding embedded substructures like a netform. The second is showing rates of substitution described by the basic equations. Then the use of the REDUCE and BASIS commands are illustrated for a variety of applications including solution analysis, infeasibility diagnosis and redundancy detection.

**Boots on the Ground** Leigh Neville, 2025-02-13 Written by a renowned expert in modern conflicts, this fully illustrated book provides an examination of ground warfare over the past 20 years and looks ahead to the future. Using lessons drawn from recent history, including the war in Ukraine, *Boots on the Ground* offers a fascinating insight into how armies and battlefields of the future will look. Each chapter details one key aspect of modern ground warfare, expertly assessing the technologies and tactics in use at the sharp end. From artillery nicknamed the God of War to combat engineering to the so-called battlefield taxis or Infantry Fighting Vehicles, each chapter is packed full of detail and unpublished photographs. *Boots on the Ground* also reveals the increasing importance of the Grey Zone and how cyber operations will have a direct impact on operations. This has been evident in Ukraine, where cities have been attacked by Russian drones and Ukrainian forces sank a Russian ship in the Black Sea using a Bayraktar drone. But a case is also made for the continued importance of the infantry, showing how technology can only do so much and only then if in the hands of well-trained boots on the ground.
