A Handbook of Global Freshwater Invasive Species Robert A. Francis, 2012-03-12 Invasive non native species are a major threat to global biodiversity Often introduced accidentally through international travel or trade they invade and colonize new habitats often with devastating consequences for the local flora and fauna Their

environmental impacts can range from damage to resource production e.g. agriculture and forestry and infrastructure e.g. buildings, road and water supply to human health. They consequently can have major economic impacts. It is a priority to prevent their introduction and spread as well as to control them. Freshwater ecosystems are particularly at risk from invasions and are landscape corridors that facilitate the spread of invasives. This book reviews the current state of knowledge of the most notable global invasive freshwater species or groups based on their severity of economic impact, geographic distribution outside of their native range, extent of research and recognition of the ecological severity of the impact of the species by the IUCN. As well as some of the very well known species, the book also covers some invasives that are emerging as serious threats. Examples covered include a range of aquatic and riparian plants, insects, molluscs, crustacea, fish, amphibians, reptiles and mammals as well as some major pathogens of aquatic organisms. The book also includes overview chapters synthesizing the ecological impact of invasive species in fresh water and summarizing practical implications for the management of rivers and other freshwater habitats.

The Oxford Handbook of Comparative Environmental Law Emma Lees, Jorge E. Viñuales, 2019-04-25. This Handbook is the first comprehensive account of comparative environmental law. It examines in detail the methodological foundations of the discipline as well as the substance of environmental law across countries from four vantage points: country studies from all continents; responses to common problems including air pollution, water management, nature conservation, genetically modified organisms, climate change and energy, chemicals, waste; foundational components of environmental law systems including principles, property rights, administrative and judicial organisation, command and control, regulation, market mechanisms, informational techniques and liability mechanisms; and common interactions of environmental protection with the broader public, private and criminal law contexts. The volume brings together the foremost authorities in this field from around the world to provide a concise, self-contained and technically rigorous account of environmental law as a single overall system.

Endocrine-Disrupting Chemicals Paromita Chakraborty, Girija K. Bharat, Brij Mohan Sharma, Pardeep Singh, 2023-11-24. *Endocrine Disrupting Chemicals: Fate, Detection and Remediation* provides both the practical and theoretical aspects of the origin and removal of EDCs. The book integrates in one system all relevant research in monitoring, detection and control and provides a multi barrier approach to managing EDCs that helps relevant stakeholders take preventive measures for the risks associated with EDCs in the environment e.g. water, wastewater, soil and other natural ecosystems. The book not only provides a technological solution for managing these emerging pollutants but also comprehensively treats the origin, fate and mechanisms of EDCs. This makes the book an indispensable source of information for researchers to develop sustainable, affordable and commercially viable monitoring and remedial systems. Crucial resource for the development of sustainable, affordable and commercially viable monitoring and remedial systems. Describes existing removal methodologies along with the discussion on the future scope of improvement in terms of their efficiency and deployment. Elucidates both practical and theoretical aspects of EDCs: origin, monitoring and removal. **Laxton's Building Price Book 2002 V B**
