New York Subways New York Subways:

The New York City Subway System Ronald A. Reis, 2009 Teeming with a population of 35 million at the end of the 19th century the island of Manhattan couldn't meet the city's demand for rapid transit with its horse drawn trolleys and elevated train lines New York City needed a subway system After four years of digging and diverting miles of utilities and tunneling under the Harlem River the city's residents celebrated a new era in mass transit on October 27 1904 with the opening of a nine mile subway route In the century to come the New York subway would grow and expand to a system that runs 24 hours a day seven days a week with 6 400 cars 468 stations a daily ridership of 4.5 million and 842 miles of track longer than the distance from New York to Chicago Politics graffiti and unbelievable construction challenges combined to make the building and running of the New York subway system one of the America's greatest civic undertakings New York Subways Gene Sansone, 2004-11-29 The first subway line in New York City opened on October 27 1904 To celebrate the centennial of this event the Johns Hopkins University Press presents a new edition of Gene Sansone's acclaimed book *Evolution of New York City Subways* Produced under the auspices of New York's Metropolitan Transit Authority this comprehensive account of the rapid transit system's design and engineering history offers an extensive array of photographs engineering plans and technical data for nearly every subway car in the New York City system from the days of steam and cable to the present The product of years of meticulous research in various city archives this book is organized by type of car from the 1903-04 wood and steel Composite cars to the R142 cars put into service in 2000 For each car type Sansone provides a brief narrative history of its design construction and service record followed by detailed schematic drawings and accompanying tables that provide complete technical data from the average cost per car and passenger capacity to seat and structure material axle load and car weight Sansone also includes a helpful subway glossary from A Car the end car in a multiple car coupled unit to Zone a section of the train to the conductor's left or right side Subway and train enthusiasts students of New York City history and specialists in the history of technology will appreciate this updated and authoritative reference work about one of the twentieth century's greatest urban achievements The New York Subways Lesley A. DuTemple, 2002-10-01 Traces the history of the underground transportation system in New York City discussing the politics involved how it was financed the men who built it and the construction techniques The Subways Seeded the Massive Coronavirus Epidemic in New York City Jeffrey E. Harris, 2020 New York City's multitentacled subway system was a major disseminator if not the principal transmission vehicle of coronavirus infection during the initial takeoff of the massive epidemic that became evident throughout the city during March 2020 The near shutoff of subway ridership in Manhattan down by over 90 percent at the end of March correlates strongly with the substantial increase in the doubling time of new cases in this borough Maps of subway station turnstile entries superimposed upon zip code level maps of reported coronavirus incidence are strongly consistent with subway facilitated disease propagation Local train lines appear to have a higher propensity to transmit

infection than express lines Reciprocal seeding of infection appears to be the best explanation for the emergence of a single hotspot in Midtown West in Manhattan Bus hubs may have served as secondary transmission routes out to the periphery of the city
