Children in the Bible and the Ancient World Shawn W. Flynn, 2019-03-29 The topic of children in the Bible has long been under represented but this has recently changed with the development of childhood studies in broader fields and the work of several dedicated scholars While many reading methods are employed in this emerging field comparative work with children in the ancient world has been an important tool to understand the function of children in biblical texts Children in the Bible and the Ancient World broadly introduces children in the ancient world and specifically children in the Bible It brings together an international group of experts who help readers understand how children are constructed in biblical literature across three broad areas children in the Hebrew Bible and the Ancient Near East children in Christian writings and the Greco Roman world and children and materiality The diverse essays cover topics such as vows in Ugarit and the Hebrew Bible obstetric knowledge infant abandonment the role of marriage Greek abandonment texts ritual entry for children into Christian communities education sexual abuse and the role of archeological figurines in children s lives The volume also includes expertise in biological anthropology to study the skeletal remains of ancient children as well as how ancient texts illuminate Mary s female maturity The volume is written in an accessible style

suitable for non specialists and it is equipped with a helpful resource bibliography that organizes select secondary sources from these essays into meaningful categories for further study Children in the Bible and the Ancient World is a helpful introduction to any who study children and childhood in the ancient world In addition the volume will be of interest to experts who are engaged in historical approaches to biblical studies while appreciating how the ancient world continues to illuminate select topics in biblical texts Human and Nonhuman Bone Identification Diane L. France,2008-12-22 When a bone of unknown origin is found at a location forensic implications arise immediately Is this bone human and if so is it evidence of a murder Human and Non Human Bone Identification A Color Atlas presents a comprehensive handbook of photographs and other information essential for law enforcement and forensic anthropologists when examin *Human and Nonhuman Bone Identification* Diane L. France,2010-11-30 In Human and Nonhuman Bone Identification A Color Atlas Diane L France one of the most respected forensic anthropologists in the world offered a comprehensive handbook of photographs and other information essential for examining skeletal remains and determining species and body parts Conveniently designed for field use this compact version of Nonhuman Bone Identification Heather A. Walsh-Haney,Jason H. Byrd,Sharon Jones,2009-03-15 The skills involved in nonhuman bone identification may take non experts years to learn and some identifications require direct sample comparisons Therefore a photo driven field guide is in great demand This book provides scale photos of nonhuman bones that are typically found in forensic contexts which are often mistaken for human skeletal material as well as photos of taphonomic occurrences that typify postmortem change in nonhuman material The book shows how to prepare specimens for skeletal analysis and photograph them properly and includes case studies and exclusion matrices It also includes geographic distribution information on forensically significant animals reptiles and fish

Comparative Skeletal Anatomy Bradley J. Adams,Pamela J. Crabtree,2008-02-28 This is a photographic atlas of common animal bones designed for use by the forensic scientist or archaeologist This volume is the first to focus comparatively on both human and animal osteology It features more than 300 illustrations of skeletons Throughout animal bones are photographed alongside the corresponding human bone allowing the reader to observe size and shape variations

Human Vs Non-human Bone B. Corrieri,2018 Comparative Cortical Bone Thickness in Human and Non-human Mammal Long Bones Sarah L. Croker,2011 **Long Bone Morphometrics for Human from Non-human**

Discrimination Bree Saulsman,University of Western Australia. Centre for Forensic Science,2010 Forensic anthropologists are frequently required to confirm the human origin of complete and partial skeletal remains This determination however can be difficult for bone fragments with few or no distinctive morphological landmarks Current methods of distinguishing human from non human bone fragments include microscopic immunological and DNA testing which are each limited to some degree e g time consuming and expensive The purpose of this study is to investigate an alternative morphometric approach to quantify the external structure of human long bones humeri femora tibiae compared to quadrupedal sheep dog pig and

bipedal kangaroo emu animals commonly found in Australia Eight traditional linear measurements were taken on a sample of 50 human and at least 10 of each of the five non human species measurements were then analysed using ANOVA canonical variates analysis CVA and direct discriminant analysis The results from ANOVA and CVA indicate morphometric variation between the six species five for the humerus which were able to be correctly classified into their corresponding groups with a high degree of expected accuracy humerus 70 97 8% femur 70 9 97 3% and tibia 72 4 96 2% Direct discriminant analysis further separated the human from the combined non human species with a cross validated classification accuracy of 95% or higher More importantly however the technique also proved to be accurate if only a fragment of the diaphysis is analysed classification accuracy 63 99% As it may not always be possible to accurately determine the known midshaft of a bone especially if only a relatively small fragment is available the potential forensic utility of a method requiring a whole bone has to be considered In order to assess whether the power to discriminate between humans and non humans is significantly reduced if measurements are taken up to 2cm above and below the known midshaft a series of measurements antero posterior diameter medio lateral diameter and midshaft circumference were taken on 17 human and 50 pooled non human species 40 for the ii humeri Overall it was found that there is only a small degree of size variation within 2cm above or below the known midshaft with relatively low average standard deviation ranges for the three human and non human bones humerus 0 420 2 2 05 mm femur 0 345 0 586 mm tibia 1 034 2 676 mm Not knowing the precise location of the midshaft on classification accuracy was also shown to have a relatively small impact especially for the tibia which appears to be the bone of choice for attempting to distinguish between the human and non human species considered in the present study This study has provided strong evidence that quantifying the external structure of long bones is a forensically viable technique for species discrimination This project has also shown that morphometric methods can be successfully applied for human from non human identification when remains are fragmentary and lack diagnostic muscle attachment marks or articular regions Overall the results of this study have outlined a forensically useful non invasive method to distinguish human from non human bones

Identifying and Interpreting Animal Bones April M. Beisaw, 2013-10-16 Offering a field tested analytic method for identifying faunal remains along with helpful references images and examples of the most commonly encountered North American species *Identifying and Interpreting Animal Bones* A Manual provides an important new reference for students avocational archaeologists and even naturalists and wildlife enthusiasts Using the basic principles outlined here the bones of any vertebrate animal including humans can be identified and their relevance to common research questions can be better understood Because the interpretation of archaeological sites depends heavily on the analysis of surrounding materials soils artifacts and floral and faunal remains it is important that non human remains be correctly distinguished from human bones that distinctions between domesticated and wild or feral animals be made correctly and that evidence of the reasons for faunal remains in the site be recognized But the ability to identify and analyze animal bones is a skill that is not easy to

learn from a traditional textbook In *Identifying and Interpreting Animal Bones* veteran archaeologist and educator April Beisaw guides readers through the stages of identification and analysis with sample images and data also illustrating how specialists make analytical decisions that allow for the identification of the smallest fragments of bone Extensive additional illustrative material from the author s own collected assemblages and from those in the Archaeological Analytical Research Facility at Binghamton University in New York are also available in the book s online supplement There readers can view and interact with images to further understanding of the principles explained in the text

Differences in Osteon Banding Between Human and Nonhuman Bone DM. Mulhern,DH. Ubelaker,2001 The objective of this paper is to compare patterns of osteon organization in human and nonhuman bone A linear organization of Haversian systems in nonhuman bone where osteons line up in rows has been reported but has not been quantified The present research provides a quantitative examination of this observation through a comparative analysis of the femoral midshaft from human and nonhuman bone Femoral midshaft thin sections from 60 humans were compared to femoral midshaft sections from nine sheep and six miniature swine The presence or absence of osteon banding was recorded and if present described Results indicate that 2 out of 60 human sections and 5 out of 15 nonhuman sections exhibit osteon banding x2 9 46 p *Identification of Human Vs Non-human Bone (Sus Scrofa) in Forensic Anthropology* Marco Cummaudo,2018
