Mind To Mind Studies In Consciousness:

Mind and its Place in the World Alexander Batthyány, Avshalom Elitzur, 2013-05-02 What is mind What is its relationship to the physical world Is consciousness a causative agent in the physical world With much progress being made in the neurosciences many have thought that these questions could be answered by reducing them to questions about physical systems such as the brain But this approach has foundered on the core problem of consciousness Why is it that some brain processes are accompanied by conscious awareness This anthology points out new sources and unexamined paths of consciousness research By presenting a wide spectrum of non reductive theories the volume endeavours to overcome the dichotomy between dualism and monism that keeps plaguing the debate in favour of new and more differentiated positions

The Tides of Mind: Uncovering the Spectrum of Consciousness David Gelernter, 2016-02-22 A rock star New York Times of the computing world provides a radical new work on the meaning of human consciousness The holy grail of psychologists and scientists for nearly a century has been to understand and replicate both human thought and the human mind In fact it is what attracted the now legendary computer scientist and AI authority David Gelernter to the discipline in the first place As a student and young researcher in the 1980s Gelernter hoped to build a program with a dial marked focus At maximum focus the program would think rationally formally reasonably As the dial was turned down and focus diminished its mind would start to wander and as you dialed even lower this artificial mind would start to free associate eventually ignoring the user completely as it cruised off into the mental adventures we know as sleep While the program was only a partial success it laid the foundation for *The Tides of Mind* a groundbreaking new exploration of the human psyche that shows us how the very purpose of the mind changes throughout the day Indeed as Gelernter explains when we are at our most alert when reasoning and creating new memories is our main mental business the mind is a computer like machine that keeps emotion on a short leash and attention on our surroundings As we gradually tire however and descend the mental spectrum reasoning comes unglued Memory ranges more freely the mind wanders and daydreams grow more insistent Self awareness fades reflection blinks out and at last we are completely immersed in our own minds With far reaching implications Gelernter's landmark *Spectrum of Consciousness* finally helps decode some of the most mysterious wonders of the human mind such as the numinous light of early childhood why dreams are so often predictive and why sadism and masochism underpin some of our greatest artistic achievements It is a theory that also challenges the very notion of the mind as a machine and not through empirical studies or hard science but by listening to our great poets and novelists who have proven themselves as humanity's most trusted guides to the subjective mind and inner self In the great introspective tradition of Wilhelm Wundt and René Descartes David Gelernter promises to not only revolutionize our understanding of what it means to be human but also to help answer many of our most fundamental questions about the origins of creativity thought and consciousness

Experimental and Theoretical Studies of Consciousness Gregory R. Bock, Joan Marsh, 2008-04-30 Discusses the

various theories of consciousness from different perspectives psychological neurophysiological and philosophical Theories regarding the interaction of pain schizophrenia the brain and the nervous system with consciousness are included Also includes a discussion of the relative merits of the different theories together with the latest data from the experimental disciplines

The Consciousness Instinct Michael S. Gazzaniga, 2018-04-03 How do neurons turn into minds How does physical stuff atoms molecules chemicals and cells create the vivid and various worlds inside our heads The problem of consciousness has gnawed at us for millennia In the last century there have been massive breakthroughs that have rewritten the science of the brain and yet the puzzles faced by the ancient Greeks are still present This book puts the latest research in conversation with the history of human thinking about the mind giving a big picture view of what science has revealed about consciousness The idea of the brain as a machine first proposed centuries ago has led to assumptions about the relationship between mind and brain that dog scientists and philosophers to this day The author asserts that this model has it backward brains make machines but they cannot be reduced to one New research suggests the brain is actually a confederation of independent modules working together Understanding how consciousness could emanate from such an organization will help define the future of brain science and artificial intelligence and close the gap between brain and mind

Consciousness Unbound Edward F. Kelly, Paul Marshall, 2021-03-16 Building on the groundbreaking research of Irreducible Mind and Beyond Physicalism Edward Kelly and Paul Marshall gather a cohort of leading scholars to consider the significance of extraordinary experiences for our understanding of reality Currently emerging as a middle ground between warring fundamentalisms of religion and science an expanded science based understanding of nature finally accommodates empirical realities of spiritual sorts while also rejecting rationally untenable overbeliefs The vision sketched here provides an antidote to the prevailing postmodern disenchantment of the world and demeaning of human possibilities It not only more accurately and fully reflects our human condition but engenders hope and encourages ego surpassing forms of human flourishing It offers reasons for us to believe that freedom is real that our human choices matter and that we have barely scratched the surface of our human potentials It also addresses the urgent need for a greater sense of worldwide community and interdependence a sustainable ethos by demonstrating that under the surface we and the world are much more extensively interconnected than previously recognized

Consciousness as a Scientific Concept Elizabeth Irvine, 2012-10-13 The source of endless speculation and public curiosity our scientific quest for the origins of human consciousness has expanded along with the technical capabilities of science itself and remains one of the key topics able to fire public as much as academic interest Yet many problematic issues identified in this important new book remain unresolved Focusing on a series of methodological difficulties swirling around consciousness research the contributors to this volume suggest that consciousness is in fact not a wholly viable scientific concept Supporting this eliminativist stance are assessments of the current theories and methods of consciousness science in their own terms as well as applications of good scientific practice

criteria from the philosophy of science For example the work identifies the central problem of the misuse of qualitative difference and dissociation paradigms often deployed to identify measures of consciousness It also examines the difficulties that attend the wide range of experimental protocols used to operationalise consciousness and the implications this has on the findings of integrative approaches across behavioural and neurophysiological research The work also explores the significant mismatch between the common intuitions about the content of consciousness that motivate much of the current science and the actual properties of the neural processes underlying sensory and cognitive phenomena Even as it makes the negative eliminativist case the strong empirical grounding in this volume also allows positive characterisations to be made about the products of the current science of consciousness facilitating a re identification of target phenomena and valid research questions for the mind sciences

Mindmelding William Hirstein, 2012-01-26 Can consciousness and the human mind be understood and explained in sheerly physical terms Materialism is a philosophical scientific theory according to which the mind is completely physical This theory has been around for literally thousands of years but it was always stymied by its inability to explain how exactly mere matter could do the amazing things the mind can do Beginning in the 1980s however a revolution began quietly boiling away in the neurosciences yielding increasingly detailed theories about how the brain might accomplish consciousness Nevertheless a fundamental obstacle remains Contemporary research techniques seem to still have the scientific observer of the conscious state locked out of the sort of experience the subjects themselves are having Science can observe stimulate and record events in the brain but can it ever enter the most sacred citadel the mind Can it ever observe the most crucial properties of conscious states the ones we are aware of If it can't this creates a problem If conscious mental states lack a basic feature possessed by all other known physical states i.e. the capability to be observed or experienced by many people this gives us reason to believe that they are not entirely physical In this intriguing book William Hirstein argues that it is indeed possible for one person to directly experience the conscious states of another by way of what he calls mindmelding This would involve making just the right connections in two people's brains which he describes in detail He then follows up the many other consequences of the possibility that what appeared to be a wall of privacy can actually be breached Drawing on a range of research from neuroscience and psychology and looking at executive functioning mirror neuron work as well as perceptual phenomena such as blind sight and filling in this book presents a highly original new account of consciousness

The Animal Mind Kristin Andrews, 2014-10-30 The study of animal cognition raises profound questions about the minds of animals and philosophy of mind itself Aristotle argued that humans are the only animal to laugh but in recent experiments rats have also been shown to laugh In other experiments dogs have been shown to respond appropriately to over two hundred words in human language In this introduction to the philosophy of animal minds Kristin Andrews introduces and assesses the essential topics problems and debates as they cut across animal cognition and philosophy of mind She addresses the following key topics what is cognition and what is it to have a mind What questions

should we ask to determine whether behaviour has a cognitive basis the science of animal minds explained ethology behaviourist psychology and cognitive ethology rationality in animals animal consciousness what does research into pain and the emotions reveal What can empirical evidence about animal behaviour tell us about philosophical theories of consciousness does animal cognition involve belief and concepts do animals have a Language of Thought animal communication other minds do animals attribute mindedness to other creatures moral reasoning and ethical behaviour in animals animal cognition and memory Extensive use of empirical examples and case studies is made throughout the book These include Cheney and Seyfarth s vervet monkey research Thorndike s cat puzzle boxes Jensen s research into humans and chimpanzees and the ultimatum game Pankseep and Burgdorf s research on rat laughter and Clayton and Emery s research on memory in scrub jays Additional features such as chapter summaries annotated further reading and a glossary make this an indispensable introduction to those teaching philosophy of mind animal cognition It will also be an excellent resource for those in fields such as ethology biology and psychology

Brain, Self and Consciousness Sangeetha Menon, 2013-10-24 This book discusses consciousness from the perspectives of neuroscience neuropsychiatry and philosophy It develops a novel approach in consciousness studies by charting the pathways in which the brain challenges the self and the self challenges the brain The author argues that the central issue in brain studies is to explain the unity continuity and adherence of experience whether it is sensory or mental awareness phenomenal or self consciousness To address such a unity is to understand mutual challenges that the brain and the self pose for each other The fascinating discussions that this book presents are How do the brain and self create the conspiracy of experience where the physicality of the brain is lost in the subjectivity of the self

Thinking Without Thinking in the Victorian Novel Vanessa L. Ryan,2012-06-07

In Thinking without Thinking in the Victorian Novel Vanessa L Ryan demonstrates how both the form and the experience of reading novels played an important role in ongoing debates about the nature of consciousness during the Victorian era Revolutionary developments in science during the mid and late nineteenth century including the discoveries and writings of Herbert Spencer William Carpenter and George Henry Lewes had a vital impact on fiction writers of the time Wilkie Collins George Eliot George Meredith and Henry James read contributions in what we now call cognitive science that asked what is the mind These Victorian fiction writers took a crucial step asking how we experience our minds how that experience relates to our behavior and questions of responsibility how we can gain control over our mental reflexes and finally how fiction plays a special role in understanding and training our minds Victorian fiction writers focus not only on the question of how the mind works but also on how it seems to work and how we ought to make it work Ryan shows how the novelistic emphasis on dynamic processes and functions on the activity of the mind rather than its structure or essence can also be seen in some of the most exciting and comprehensive scientific revisions of the understanding of thinking in the Victorian period This book studies the way in which the mind in the nineteenth century view is embedded not just in the body but also in behavior in social structures and finally in fiction

The Imagination in German Idealism and Romanticism Gerard Gentry, Konstantin Pollok, 2019-06-13 Explores imagination and human rationality in a crucial period of philosophy from hermeneutics and transcendental logic to ethics and aesthetics

Dreaming and Memory: Philosophical Issues Daniel Gregory, Kourken Michaelian, 2024-10-22 This edited volume is the first systematic philosophical investigation of the complex and multifarious relationships between dreaming and memory Featuring fifteen contributions by leading researchers it explores a range of issues that arise when dreaming and memory are considered together What does one remember when one remembers what one dreamt and what is it for a memory of a dream to be accurate What are the phenomenological cognitive and epistemic similarities and dissimilarities between dreaming and remembering How does the self figure in dreams and memories The book will serve as an indispensable resource both for philosophers interested in dreaming or memory and for their philosophically minded colleagues in empirical disciplines and will provide an invaluable starting point for advanced students in need of a snapshot of the state of the art in philosophical research on dreaming and memory Chapters 2 10 and 16 are available open access under a Creative Commons Attribution 4 0 International License via link.springer.com

Mysticism, Ineffability and Silence in Philosophy of Religion Laura E. Weed, 2023-01-13 The authors in this volume explore a wide variety of the contemporary approaches to mystical and religious experience to elucidate what religious experience is in its own terms and how its practitioners understand it This anthology features contributions that point out that contemporary studies of consciousness sociology hermeneutics neuroscience medicine and other fields are revealing that there is much more to be said for the inner life of a human s consciousness than reductionists and behaviorists will allow This book is one of very few that primarily takes the stance of academic practitioners explaining their own experience rather than that of academics trying to explain the phenomena away as really politics or sociology or delusion or psychological pathology or literary flights of fancy or an aberration of any of the other academic fields Most of the authors in this volume embrace the task of explaining and analyzing religious experience mysticism and the healing power of silence and presence using the resources of all of the academic disciplines as appropriate The essays contained analyze religious and non religious mystical and profoundly

personal experiences across several world religions and in areas such as art and music as well as in solving personal crises such as family disruption and patriarchal oppression The authors address the subject matter through analyses of the frequent and destructive failures of language or just noise to capture or express the nuances of the inner life of a person It is this very ineffability of self that renders the spiritual emotional and interior life of individuals beyond cognition and perception of the straightforward sorts embraced by most cognitive disciplines The contributors come from a variety of cross disciplinary fields to bring forth the possibilities for an intuitive and creative rich and growing inner life for a human This text appeals to students researchers and practitioners
