Lawless, Ranjeev Mittu, Donald Sofge, 2018-12-07 This volume addresses context from three comprehensive perspectives first its importance the issues surrounding context and its value in the laboratory and the field second the theory guiding the AI used to model its context and third its applications in the field e g decision making This breadth poses a challenge The book analyzes how the environment context influences human perception cognition and action While current books approach context narrowly the major contribution of this book is to provide an in depth review over a broad range of topics for a computational context no matter its breadth The volume outlines numerous strategies and techniques from world class scientists who have adapted their research to solve different problems with AI in difficult environments and complex domains to address the many computational challenges posed by context Context can be clear uncertain or an illusion Clear contexts A father praising his child a trip to the post office to buy stamps a policewoman asking for identification Uncertain contexts A sneak attack a surprise witness in a courtroom a shout of Fire Fire Contexts as illusion Humans fall prey to illusions that

machines do not Adelson's checkerboard illusion versus a photometer Determining context is not easy when disagreement exists interpretations vary or uncertainty reigns Physicists like Einstein relativity Bekenstein holographs and Rovelli universe have written that reality is not what we commonly believe Even outside of awareness individuals act differently whether alone or in teams Can computational context with AI adapt to clear and uncertain contexts to change over time and to individuals machines or robots as well as to teams If a program automatically knows the context that improves performance or decisions does it matter whether context is clear uncertain or illusory Written and edited by world class leaders from across the field of autonomous systems research this volume carefully considers the computational systems being constructed to determine context for individual agents or teams the challenges they face and the advances they expect for the science of context
