Cyberphobia Edward Lucas,2015-08-27 Crossing the road we look both ways Riding a bicycle at night we use lights So why is our attitude towards online security so relaxed Edward Lucas reveals the ways in which cyberspace is not the secure zone we may hope how passwords provide no significant obstacle to anyone intent on getting past them and how anonymity is easily accessible to anyone malign or benign willing to take a little time covering their tracks The internet was designed by a small group of computer scientists looking for a way to share information quickly In the last twenty years it has expanded rapidly to become a global information superhighway available to all comers but also wide open to those seeking invisibility This potential for anonymity means neither privacy nor secrecy are really possible for law abiding corporations or citizens As identities can be faked so easily the very foundations on which our political legal and economic systems are based are vulnerable Businesses governments national security organisations and even ordinary individuals are constantly at risk and with our ever increasing dependence on the internet and smart phone technology this threat is unlikely to diminish in fact the target for cyber criminals is expanding all the time Not only does *Cyberphobia* lay bare the dangers of the internet it also explores the most successful defensive cyber strategies options for tracking down transgressors and argues that we are moving into a post digital age where once again face to face communication will be the only interaction that really matters
