Schneider, 2021-03-01 The Indiana University School of Medicine A History tells the story of the school and its faculty and students in fascinating detail Founded in the early 20th century the Indiana University School of Medicine went on to become a leading medical facility preparing students for careers in medicine and providing healthcare across Indiana Historian William Schneider draws on a treasure trove of historical images and documents to recount how the school began life as the Medical Department in 1903 and later became the Indiana University School of Medicine which was established as a full four year school after merging with two private schools in 1908 Thanks to state support and local philanthropy it quickly added new hospitals which by the 1920s made it the core of a medical center for the city of Indianapolis and the only medical school in the state From modest beginnings and the challenges of the Great Depression and the Second World War the medical school has grown to meet the demands of every generation becoming the leading resource for not only the education of physicians and for the conducting of medical research but also for the care and treatment of patients at the multi hospital medical center Today the school boasts an annual income of over 1 5 billion with over 2 000 full time faculty teaching 1 350 MD students and over 250 million in external research funding *Oxford Textbook of Old Age Psychiatry* Tom Denning, Alan Thomas, Robert Stewart, John-Paul Taylor, 2021 Part of the authoritative Oxford Textbooks in Psychiatry series Oxford Textbook of Old Age Psychiatry Third Edition has been thoroughly updated to reflect the developments in old age psychiatry since publication of the Second Edition in 2013 and remains an essential reference for anyone interested in the mental health care of older people Current Catalog National Library of Medicine (U.S.), 1993 First multi year cumulation covers six

years 1965 70      **Encyclopedia of Science and Technology Communication** Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics      [Handbook of Research on Creating Meaningful Experiences in Online Courses](#) Kyei-Blankson, Lydia, Ntuli, Esther, Blankson, Joseph, 2019-11-29 While online courses are said to be beneficial and many reputable brick and mortar higher education institutions are now offering undergraduate and graduate programs online there is still ongoing debate on issues related to credibility and acceptability There is some reluctance to teach online and to admit and hire

students who have enrolled in online programs Given these concerns it is essential that educators in online communities continue to share the significant learning experiences and outcomes that occur in online classrooms and highlight pedagogical practices used by online instructors to make their courses and programs comparable to those offered face to face The Handbook of Research on Creating Meaningful Experiences in Online Courses is a comprehensive research book that examines the quality of courses in higher education that are offered exclusively online and details strategies and practices used by online instructors to create meaningful teaching and learning experiences in online courses Featuring a range of topics such as gamification professional development and learning outcomes this book is ideal for academicians researchers educators administrators instructional designers curriculum developers higher education faculty and students

**Promoting Healthy Aging Across the Lifespan** Elena Carrillo-Alvarez, Miriam Rodriguez-Monforte, Jordi Vilaró, Katherine Simone McGilton, 2024-12-26 Worldwide there is a generalized trend toward aged societies Between 2015 and 2050 the proportion of the world's population over 60 years will nearly double from 12% to 22% As life expectancy continues to increase and natality rates lower not only the composition of countries will change but also its health landscape However an increased life expectancy does not necessarily mean a healthy life In most high income countries more than 20% of those years are lived in ill health due to chronic conditions caused by non communicable diseases which compromises functional ability and well being key components of healthy aging In this way not only people's lives but also societal structures are being affected Based on the life course approach to healthy aging aging starts from conception In this regard the promotion of healthy aging requires preventive strategies that enhance capacities during growth and development maintain them for as long as possible after maturity and slow down their rate of decline Moreover considering healthy aging across the lifespan entails focusing on different factors life opportunities and choices that might significantly influence health status lifestyle as well as health and social inequalities in older age and challenges the focus of most research on the topic which exclusively investigates the effect of influences operating in the later stages of life

**Affective-Discursive Practice in Online Medical Consultations in China** Yu Zhang, 2022-08-18 This book provides readers with the latest research on the affective aspect of online interactions between doctors and e patients in the context of China from a poststructuralist discourse analysis perspective At the heart of this book is the presentation of four chapters which address 1 indirect negative emotional acts by e patients and empathic acts by doctors constituting affective practice 2 the interactional discursive features involved in the affective practice 3 discursive positions of e patients and doctors within the affective practice context and 4 power relations that are reflected in the positionings This book sheds light on the importance of examining the affective facet of medical consultation when it comes to identifying non traditional positions and power relations in doctor patient communication It also provides the implication that e healthcare platforms especially those with an e commercialized model for healthcare services have potential to produce a type of neo liberal discourse the e commercialized medical consultation

discourse in which patients and caregivers who are acknowledged as the less powerful group in the traditional healthcare activities are empowered and privileged
