Time and the Multiverse Gerald Holdsworth PhD, 2017-12-13 Is there a mechanism through which some people can see the future How can a life in this universe be predetermined Where might information about the future exist If we are to have faith in our grasp of physics and cosmological principles it must exist outside this universe How can we structure a multiverse so that it broadly accommodates precognition In *Time and the Multiverse* author Dr Gerald Holdsworth addresses these questions and more and discusses phenomena that cannot be explained by the principles of established physics Holdsworth accepted the challenge of explaining the basis behind the common experience of precognition the easiest phenomena to verify but the hardest to explain He tells how he built a looped version of the serial time zoned multiverse which exhibits time zoning within the regular clock time system as well as revealing what can be termed a timing system which coordinates the processes within the multiverses Cosmic quantum computer This second time is in practice represented by a fixed frequency of time pips occurring within the computer Author notes What I present in chapter 2 of this book concerning the dynamics of the multiverse cannot be described by mathematical equations because the physics isn't available I have relied entirely on logical statements and geometry to produce the Cosmic Blueprint and from a special case of it the Cosmological model Arthur Eddington and Wolfgang Pauli knew that to achieve a complete understanding of our existence one has to include all the unexplained anomalies like precognition along with established physics quantum mechanics particle physics and Einstein's gravity theory Eddington and John W Dunne realized that time would play a major role in tying together all the evidence Dunne's attempts ending in 1955 were invalid due to his deliberate exclusion of the existence of multiple universes He did at least finally confess his spiritual experiences

Science and Religion Yves Gingras, 2017-09-05 Today we hear renewed calls for a dialogue between science and religion why has the old question of the relations between science and religion now returned to the public domain and what is at stake in this debate To answer these questions historian and sociologist of science Yves Gingras retraces the long history of the troubled relationship between science and religion from the condemnation of Galileo for heresy in 1633 until his rehabilitation by John Paul II in 1992 He reconstructs the process of the gradual separation of science from theology and religion showing how God and natural theology became marginalized in the scientific field in the eighteenth and nineteenth centuries In contrast to the dominant trend among historians of science Gingras argues that science and religion are social institutions that give rise to incompatible ways of knowing rooted in different methodologies and forms of knowledge and that there never was and cannot be a genuine dialogue between them Wide ranging and authoritative this new book on one of the fundamental questions of Western thought will be of great interest to students and scholars of the history of science and of religion as well as to general readers who are intrigued by the new and much publicized conversations about the alleged links between science and religion
