The authors renowned experts in the field consider structural health monitoring in a new manner by casting the problem in the context of a machine learning statistical pattern recognition paradigm first explaining the paradigm in general terms then explaining the process in detail with further insight provided via numerical and experimental studies of laboratory test specimens and in situ structures. This paradigm provides a comprehensive framework for developing SHM solutions. Structural Health Monitoring A Machine Learning Perspective makes extensive use of the authors detailed surveys of the technical literature the experience they have gained from teaching numerous courses on this subject and the results of performing numerous analytical and experimental structural health monitoring studies. Considers structural health monitoring in a new manner by casting the problem in the context of a machine learning statistical pattern recognition paradigm. Emphasises an integrated approach to the development of structural health monitoring solutions by coupling the measurement hardware portion of the problem directly with the data interrogation algorithms. Benefits from extensive use of the authors detailed surveys of 800 papers in the technical literature and the experience they have gained from teaching numerous short courses on this subject.
