**Militarizing the Environment** Robert P. Marzec, 2015 As the seriousness of climate change becomes more and more obvious military institutions are responding by taking a prominent role in the governing of environmental concerns engaging in climate change war games and preparing for the effects of climate change from conflicts due to loss of food water and energy to the mass migration of millions of people displaced by rising sea levels This combat oriented stance stems from a self destructive pattern of thought that Robert P Marzec names environmentality an attitude that has been affecting human environmental relations since the seventeenth century Militarizing the Environment traces the rise of this influential mindset in America and other nations that threatens to supplant ideas of sustainability with demands for adaptation In this extensive historical study of scientific military political and economic formations across five centuries Marzec reveals how environmentality has been instrumental in the development of today s security society informing the creation of the military industrial complex during World War II and the National Security Act that established the CIA during the Cold War Now embedded in contemporary Western thought environmentality has even infiltrated scientific thinking transforming Darwinian insights into a quasi theology that makes security the biological basis of existence Marzec exposes the self destructive nature of this increasingly accepted worldview and offers alternatives that counter the blind alleys of national and global security

~Thee Secure and the Dispossessed , 2016 *The Pentagon, Climate Change, and War* Neta C. Crawford, 2022-10-04 How the Pentagon became the world s largest single greenhouse gas emitter and why it s not too late to break the link between national security and fossil fuel consumption The military has for years unlike many politicians acknowledged that climate change is real creating conditions so extreme that some military officials fear future climate wars At the same time the U S Department of Defense military forces and DOD agencies is the largest single energy consumer in the United States and the world s largest institutional greenhouse gas emitter In this eye opening book Neta Crawford traces the U S military s growing consumption of energy and calls for a reconceptualization of foreign policy and military doctrine Only such a rethinking she argues will break the link between national security and fossil fuels The Pentagon Climate Change and War shows how the U S economy and military together have created a deep and long term cycle of economic growth fossil fuel use and dependency This cycle has shaped U S military doctrine and over the past fifty years has driven the mission to protect access to Persian Gulf oil Crawford shows that even as the U S military acknowledged and adapted to human caused climate change it resisted reporting its own greenhouse gas emissions Examining the idea of climate change as a threat multiplier in national security she argues that the United States faces more risk from climate change than from lost access to Persian Gulf oil or from most military conflicts The most effective way to cut military emissions Crawford suggests provocatively is to rethink U S grand strategy which would enable the United States to reduce the size and operations of the military

**Green Security Or Militarized Environment** Jyrki Käkönen, 1994 During the last years of the Cold War

security was already associated with economic and environmental issues This work discusses the different aspects of the relation between the military and the environment The discussion is related to the changing concept of security and to peace studies     Unlikely Ally Marilyn Berlin Snell,2018-08-21 An environmental journalist reveals how some California military bases are leading the charge in the fight against climate change In California the US military has begun to redefine how our national security operations relate to the destabilizing effects of climate change Several bases have taken on a largely unrecognized yet crucial role in renewable energy innovation and in preserving cultural and natural treasures These facilities are going beyond environmental stewardship to align national defense with energy security and the protection of endangered species In Unlikely Ally environmental journalist Marilyn Berlin Snell takes readers through these bases to examine what twenty first century sustainable energy infrastructure looks like whether combat readiness and species protection can successfully coexist how cutting edge technology and water conservation practices could transform life in a resource constrained world and how the Department of Defense s scientific research into the metabolic secrets of the endangered desert tortoise could speed human travel to Mars     **Climate Change and the Military** Burkely Hermann,2022

Implications of Climate Change for the U.S. Army Max Brosig,Parker Frawley,Andrew Hill,Molly Jahn,Michael Marsicek,Aubrey Paris,Matthew Rose,Amar Shambalamts,Nicole Thomas,2019 Current conversations about climate change and its impacts are often rancorous and politically charged As an organization that is by law non partisan the Department of Defense DoD is precariously unprepared for the national security implications of climate change induced global security challenges This study examines the implications of climate change for the United States Army This includes national security challenges associated with or worsened by climate change and organizational challenges arising from climate change related issues in the domestic environment Given that the study s starting point is the implications of climate change for the U S Army and the Army is therefore the focus of the analysis and recommendations That said much of the analysis involves DoD and other elements of the government and most of the Army specific recommendations have parallels that apply to other military services     Threat Multiplier Sherri Goodman,2024-08-27 Threat Multiplier takes us onto the battlefield and inside the Pentagon to show how the US military is confronting the biggest security risk in global history climate change More than thirty years ago when Sherri Goodman became the Pentagon s first Chief Environmental Officer no one would have imagined this role for our armed forces Indeed for much of the twentieth century the Department of Defense DOD was better known for containing the Soviet nuclear threat than protecting the environment And yet today the military has moved from an environmental laggard to a clean energy and climate leader recognizing that a warming world exacerbates every threat from hurricanes and forest fires to competition for increasingly scarce food and water to terrorism and power plays by Russia and China The Pentagon now considers climate in war games disaster relief planning international diplomacy and even the design of its own bases What was the key to this dramatic change in military thinking What keeps today s generals and admirals up

at night How can we safeguard our national defense and our planet No one is better poised to answer these questions than Sherri Goodman who was at the vanguard of environmental leadership among our armed forces and civilian representatives In Threat Multiplier she tells the inside story of the military s fight for global security a tale that is as hopeful as it is harrowing

### **How Should the Department of Defense Approach Environmental Security Implications of Climate Change**

EMANUEL J. COHAN,2025-05-22 Environmental Security ES is a process for analyzing and responding to those environmental issues caused by anthropogenically driven environmental degradation Climate change is a major ES threat having the potential to affect U S national security and thus has significant impact for the military national defense mission This paper considers the most up to date climate change projections published by the IPCC NASA and the U S Global Change Program along with the latest national strategic guidance in order to determine actions required by the DoD An overwhelming number of greenhouse models indicate considerable changes will affect U S national security during the mid 21st century In addition the study shows the DoD is currently at the onset of strategically organizing itself to analyze climate change impacts provide combatant commanders with relevant mission preparedness information and assess impacts to U S military installations of rising sea level extreme weather events Therefore this study makes the following four recommendations 1 ES must be a national security component 2 DoD must establish an activity dedicated to develop ES related strategy 3 Climate change data should be incorporated into a yearly Intelligence Environmental Estimate 4 USJFCOM should take the lead in developing climate change related training scenarios This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact and remains as true to the original work as possible Therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work As a reproduction of a historical artifact this work may contain missing or blurred pages poor pictures errant marks etc Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant

### **Report of the Defense Science Board Task Force on Trends and Implications of Climate Change for National and International Security**

United States. Defense Science Board. Task Force on Trends and Implications of Climate Change for National and International Security,2011 Changes in climate patterns and their impact on the physical environment can create profound effects on populations in parts of the world and present new challenges to global security and stability Failure to anticipate and mitigate these changes increases the threat of more failed states with the instabilities and potential for conflict inherent in such failures This report begins with an overview of the

impacts of climate change over recent decades while recognizing uncertainty about the pace of future changes It examines the political consequences of climate change as it relates to national and international security with special attention to the African continent due to the vulnerability of African nations with high potential to intersect with United States national interests Within this context the study examined the roles of the Department of Defense and the national security community writ large in responding to effects of climate change in both the United States and in key areas of the globe The deliberations of the task force identified the urgent need for clear roles and policies throughout the US government addressing the consequences of climate change and produced a set of recommendations on how the US government can manage the near term effects on populations and the longer term need for adaptation that impacts US and international security interests The recommendations include specific roles for the Department of Defense in helping both the United States and U S Africa Command address these challenges The recommendations fall into five main areas The need for developing a robust climate information system Instituting water security as a core element of DOD strategy Roles of the national security community including the intelligence community the Department of State and the White House Guidance and DOD organization to address the full range of international climate change related issues and their impact on the evolution of DOD s missions Combatant command roles responsibilities and capacities The report emphasizes that the United States cannot enter into an open ended commitment to dealing with the need to address the near term consequences of climate change or the longer term need for adapting to the change The United States can provide needed expertise leadership and some level of resources where it is in the national interest to do so To be effective Department of Defense actions must be part of a comprehensive multi department approach and in coordination with international efforts

*Valuing National Security* Sarah E. Light, 2014

This Article proposes a hypothesis By linking a reduction in reliance on fossil fuels to the value of promoting national security what I have called the Military Environmental Complex has the potential to change individual attitudes and beliefs and therefore behavior and political debate about energy use and climate change Studies have shown that individuals with certain values or political ideologies are less likely to believe in the existence of scientific consensus about climate change have positive attitudes toward addressing climate change as an urgent policy matter and behave in ways that reduce energy use Connecting climate change to national security risks and reduced fossil fuel use to strengthening the military can affect these individuals attitudes beliefs and behavior in these arenas In particular two aspects of the Military Environmental Complex can serve as potential drivers of change first the military s role as an unequivocal validator of climate science and second its current efforts to value the true costs and benefits to its mission of energy conservation and increased use of renewables Although not necessarily its goal the Military Environmental Complex thus has the potential to unleash important spillover effects in the sphere of values behavior and policy

*Climate Change and National Security* Albert Palazzo, 2022

Climate change poses a major threat to US national security and the survival of the American people as well as the existence

of every country on the planet As a threat multiplier climate change will encourage states to turn to war in order to obtain the resources their people need and which they can no longer get by non violent means The US military will need to prepare for a more dangerous and disruptive future both domestically and internationally to safeguard the nation s citizens This book highlights the risks and challenges the military will face in providing for the nation s security and the effect climate change will have on the character of war Additionally it provides recommendations for what the military will need to do to prepare for a climate affected future

**Climate Change Impacts on National Security: Threats to American Military Infrastructure, Readiness, and Lives** Esther Babson,2022 **Environment, Development, and Military Activity** Johan

Galtung,1982 **The Green Zone** Barry Sanders,2009 Environmentalism is the issue of the moment Reusable shopping bags hybrid cars and green energy solutions are all espoused as ways to reduce carbon footprints but these are only the tip of the quickly melting iceberg Sanders and Davis present a sobering revelation until US military attacks are held accountable for the war they have waged on the environment domestic changes made in good faith won t do a thing Frighteningly their argument is based primarily on research leaked by the military itself

**All Hell Breaking Loose** Michael T. Klare,2019-11-12 All Hell Breaking Loose is an eye opening examination of climate change from the perspective of the U S military The Pentagon unsentimental and politically conservative might not seem likely to be worried about climate change still linked for many people with polar bears and coral reefs Yet of all the major institutions in American society none take climate change as seriously as the U S military Both as participants in climate triggered conflicts abroad and as first responders to hurricanes and other disasters on American soil the armed services are already confronting the impacts of global warming The military now regards climate change as one of the top threats to American national security and is busy developing strategies to cope with it Drawing on previously obscure reports and government documents renowned security expert Michael Klare shows that the U S military sees the climate threat as imperiling the country on several fronts at once Droughts and food shortages are stoking conflicts in ethnically divided nations with climate refugees producing worldwide havoc Pandemics and other humanitarian disasters will increasingly require extensive military involvement The melting Arctic is creating new seaways to defend And rising seas threaten American cities and military bases themselves While others still debate the causes of global warming the Pentagon is intensely focused on its effects Its response makes it clear that where it counts the immense impact of climate change is not in doubt

**Military Basing and Climate Change** Catherine Foley,2022 *Environment, Geography, and the Future of Warfare* Shira Efron,Kurt Klein,Raphael S.

Cohen,2022-04-30 This volume of the Future of Warfare series examines significant environmental and geographic trends that could affect U S national security including the opening of the Arctic sea level rise water scarcity and increasing urbanization

**The Greening of the U.S. Military** Robert F. Durant,2007 By the Cold War s end U S military bases harbored nearly 20 000 toxic waste sites All told cleaning the approximately 27 million acres is projected to cost hundreds of

billions of dollars And yet while progress has been made efforts to integrate environmental and national security concerns into the military s operations have proven a daunting and intrigue filled task that has fallen short of professed goals in the post Cold War era In *The Greening of the U S Military* Robert F Durant delves into this too little understood world of defense environmental policy to uncover the epic and on **Climate Change on the Battlefield** Erin Sikorsky,2025-06-26 What do rising temperatures and increasing extreme weather events mean for military readiness How will climate hazards affect the conflicts of today and tomorrow What new missions are militaries undertaking in response *Climate Change on the Battlefield* examines how climate change is reshaping modern military operations and the role of international militaries in responding to the effects of the climate crisis The book s international case study approach will provide concrete answers to these questions looking at specific geographies such as Afghanistan and the Arctic as well as types of military operations including firefighting humanitarian assistance and disaster relief missions The book also explores in detail how different countries from across every continent and international institutions are responding to these threats while also critically assessing their own emissions and contributions to the climate crisis Differing country responses are assessed from those that are integrating climate change impacts into a more traditional understanding of military roles to those countries that are redefining the role of the military in the face of climate change Finally it examines whether or not current military responses are commensurate with the risks ahead and what form the future relationship between the military and climate breakdown is likely to take
