CORROSION POLICY DECISION MAKING Explore the science management economy ecology and engineering of corrosion management and prevention In *Corrosion Policy Decision Making* distinguished consultant and corrosion expert Dr Reza Javaherdashti delivers an insightful overview of the fundamental principles of corrosion with a strong focus on the applicability of corrosion theory to industrial practice The authors demonstrate various aspects of smart corrosion management and persuasively make the case that there is a real difference between corrosion management and corrosion knowledge management The book contains seven chapters that each focuses on one important aspect of corrosion and corrosion management Corrosion management is an issue that is not just corrosion science or corrosion engineering but rather a combination of both elements To cover this paradoxical aspect of corrosion management chapter 2 deals with some basic introductory concepts and principles of corrosion and coating painting an important corrosion protection method while chapter 3 explains the elements of smart corrosion management in detail Another important principle of smart corrosion management is to be able to study the cost of corrosion chapter 4 introduces important points in the economics involved in a smart corrosion management As indicated earlier corrosion engineering is also an integral part of corrosion management and thus chapter 5 looks at the engineering side of corrosion by detailing the example of Process Additives EMPA Chapter 6 for the first time looks at the possibility of using TRIZ algorithm of invention in corrosion management Finally chapter 7 presents the necessary elements for building a model that would explore the mutual interaction between corrosion and environment mainly by exploring the difference between environmental impact and environmental effect Chapter 7 is also very important

because the four models so far applied to estimate the cost of corrosion Uhlig Method Hoar Method I O method and LCC method are not capable of suggesting any clear model or a sensible way of exploring the elements necessary to explain the impact of indirect costs of corrosion the most important of which being environmental damages imposed by corrosion This book is ideal for engineers students and managers working or studying corrosion Corrosion Policy Decision Making is also an indispensable resource for professionals in the fields of upstream and downstream on shore off shore oil and gas transportation mining power generation as well as major sectors of other strategic industries The Complete Guide to the Hazardous Waste Regulations Travis Wagner,1991 An explanation of the hazardous waste regulatory program of the US Environmental Protection Agency Wagner senior environmental analyst Labaat Anderson Inc examines hazardous waste regulations under the Resource Conservation and Recovery Act the Toxic Substances Control Act and the Comprehensive Environmental Response Compensation and Liability Act and presents steps a company must take to comply with these laws Contains extensive appendixes outlining regulatory compliance checklists information sources and acronyms Annotation c 2003 Book News Inc Portland OR booknews com **Corrosion** ,2001 Issues include special section called Corrosion abstracts *Expert Systems in Structural Safety Assessment* Aleksandar S. Jovanovic,Karl F. Kussmaul,Alfredo C. Lucia,Piero P. Bonissone,2013-03-08 Structural safety of industrial systems and components raises a steadily growing public scientific and engineering interest and causes permanent development of methods and techniques used for its assessment In addition to the well established engineering methods applied in the field several new methods and tools have emerged recently Among them the most novel ones are probably those related to expert system applications appearing as an important possible improvement of the current engineering practice The issue has been addressed by the international course EXPERT SYSTEMS IN STRUCTURAL SAFETY ASSESSMENT organized by MPA Stuttgart and JRC Ispra Stuttgart October 2 4 1989 and the proceedings of the course are contained in this volume of the Lecture Notes in Engineering The contributions invited lectures tackle the issues usually confronting developers and users of expert systems applied in structural engineering i e in structural safety and integrity assessment Both the book and the course are a combination of a tutorial and of presentation of the current achievements in the field Starting from the basic elements of expert systems knowledge based systems the book should guide the reader up to the applications in various particular sub domains
