THE PEDIGREE OF PERFORMANCE

The C325BEE is the latest in a long and distinguished lineage of amplifiers from NAD. This pedigree assures you of an amplifier that is technically outstanding and yet affordably priced.

HISTORICALLY SPEAKING

The C325BEE traces it's lineage all the way back to the NAD 3020 which was introduced some 30 years ago. The 3020 was a revelation at the time, setting a technical standard that astonishingly few amps, regardless of price, could even match, much less better.

Like all great inventions, the premise of the 3020 seems obvious in retrospect. Make an amplifier that is optimised for musical signals (not just laboratory test tones) and able to cope with the complex requirements of real loudspeakers (not just laboratory loading resistors). This led to NAD's redefinition of how an amplifier should be designed and exactly how much it needed to cost to exceed

the expectations of music lovers. Terms like "Dynamic Headroom" and "Peak Current Capability" that have attained a permanent place in the audiophile lexicon were coined to describe these incredible NAD amplifiers.

THE SOUND OF MAGIC

What is the "magic" that makes one amplifier sound so much better than another? It all comes down to the experience of the design team and designing the amplifier for its intended use; no more, no less.

An amplifier with Dynamic Headroom sounds "open", "effortless" and "smooth". The machine magically disappears and the music emerges recreating the atmosphere of the original musical performance.

An amplifier with high Peak Current Capability has the "rhythmic punch" that gets your toe tapping and your heart pounding. It recreates the soul of the music. If an amplifier cannot produce enough current to cope with a real loudspeaker the sound becomes "thin" and "flat" lacking the third dimension of live music.

THE SCIENCE OF MAGIC

NAD has developed several patented amplifier innovations under the direction of Bjorn Erik Edvardsen (aka BEE).

- PowerDrive technology adds huge reserves of Dynamic Headroom without adding cost by ingeniously matching the amplifier to the speaker load. This is fully automatic in operation and adjusts the power supply parameters of the amplifier to best cope with the actual musical signal and specific speaker loading characteristics.
- Soft Clipping eliminates the harsh sound that occurs when an amplifier is overdriven. This feature also protects sensitive loudspeaker tweeters that can be easily damaged by the high frequency distortion caused by clipping (clipping describes the distorted shape of a musical sine wave when an amplifier is driven beyond its power rating).
- BEE Clamp is a new answer to an old problem endemic to all transistor amplifier designs. When the output transistors produce heat faster than it can be dissipated, the amplifier becomes momentarily unstable. This happens when the music has rich high frequency
