Nanotechnology Geoffrey Hunt, Michael D. Mehta, 2006 First Published in 2006 Routledge is an imprint of Taylor Francis an informa company *The EU and Nanotechnologies* Tanja Ehnert, 2017-08-10 This book investigates the role of law in confronting major societal transformations embodied by the emergence of nanotechnologies Taking the case of the European Union it explores who the key decision makers in the regulation of nanotechnologies are and how they take decisions The questions are explored through two distinct case studies the food and chemicals sectors The book charts an incremental retreat of the European Union to its executive powers including soft law measures such as agencies guidelines or implementing measures This the author argues results in the Union's fundamental democratic control mechanisms the EU legislature and the Court of Justice of the EU being circumvented The book recommends several immediate proposals to reform EU risk regulation advocating a greater reliance on the European Parliament and outlining measures to increase the transparency of guidance drafting by EU agencies This important work provides a timely examination of how emerging technologies pose both regulatory and democratic challenges **Policy Legitimacy, Science and Political Authority** Michael Heazle, John Kane, 2015-10-05 Voters expect their elected representatives to pursue good policy and presume this will be securely founded on the best available knowledge Yet when representatives emphasize their reliance on expert knowledge they seem to defer to people whose authority derives not politically from the sovereign people but from the presumed objective status of their disciplinary bases This book examines the tensions between political authority and expert authority in the formation of public policy in liberal democracies It aims to illustrate and better understand the nature of these tensions rather than to argue specific ways of resolving them The various chapters explore the complexity of interaction between the two forms of authority in different policy domains in order to identify both common elements and differences The policy domains covered include climate geoengineering discourses environmental health biotechnology nuclear power whaling economic management and the use of force This volume will appeal to researchers and to convenors of post graduate courses in the fields of policy studies foreign policy decision making political science environmental studies democratic system studies and science policy studies *Rethinking Greenland and the Arctic in the Era of Climate Change* Frank Sejersen, 2015-06-05 This ground breaking book investigates how Arctic indigenous communities deal with the challenges of climate change and how they strive to develop self determination Adopting an anthropological focus on Greenland's vision to boost extractive industries and transform society the book examines how indigenous communities engage with climate change and development discourses It applies a critical and comparative approach integrating both local perspectives and adaptation research from Canada and Greenland to make the case for recasting the way the Arctic and Inuit are approached conceptually and politically The emphasis on indigenous peoples as future makers and right holders paves the way for a new understanding of the concept of indigenous knowledge and a more sensitive appreciation of predicaments

and dynamics in the Arctic This book will be of interest to post graduate students and researchers in environmental studies development studies and area studies *International Science and Technology Education* Ortwin Renn,Nicole Karafyllis,Andreas Hohlt,Dorothea Taube,2015-06-24 Education in science technology engineering and mathematics STEM is crucial for taking advantage of the prospects of new scientific discoveries initiating or promoting technological changes and managing opportunities and risks associated with innovations This book explores the emerging perspectives and methodologies of STEM education and its relationship to the cultural understanding of science and technology in an international context The authors provide a unique perspective on the subject presenting materials and experiences from non European industrialized as well as industrializing countries including China Japan South Korea India Egypt Brazil and the USA The chapters offer a wide scope of interpretations and comparative reviews of STEM education by including narrative elements about cultural developments considering the influence of culture and social perceptions on technological and social change and applying innovative tools of qualitative social research The book represents a comprehensive and multidisciplinary review of the current status and future challenges facing STEM education across the world including issues such as globalization interdependencies of norms and values effects on equity and social justice as well as resilience Overall the volume provides valuable insights for a broad and comprehensive international comparison of STEM philosophies approaches and experiences

Reconstructing Sustainability Science Thaddeus R. Miller,2014-12-05 The growing urgency complexity and wickedness of sustainability problems from climate change and biodiversity loss to ecosystem degradation and persistent poverty and inequality present fundamental challenges to scientific knowledge production and its use While there is little doubt that science has a crucial role to play in our ability to pursue sustainability goals critical questions remain as to how to most effectively organize research and connect it to actions that advance social and natural wellbeing Drawing on interviews with leading sustainability scientists this book examines how researchers in the emerging interdisciplinary field of sustainability science are attempting to define sustainability establish research agendas and link the knowledge they produce to societal action Pairing these insights with case studies of innovative sustainability research centres the book reformulates the sustainability science research agenda and its relationship to decision making and social action It repositions the field as a science of design that aims to enrich public reasoning and deliberation while also working to generate social and technological innovations for a more sustainable future This timely book gives students researchers and practitioners a valuable and unique analysis of the emergence of sustainability science and both the opportunities and barriers faced by scientific efforts to contribute to social action

Systems Thinking for Geoengineering Policy Robert Chris,2015-11-19 Even by the scientists most closely associated with it geoengineering the deliberate intervention in the climate at global scale to mitigate the effects of climate change is perceived to be risky For all its potential benefits there are robust differences of opinion over the wisdom of such an intervention Systems Thinking for Geoengineering Policy is the first

book to theorise geoengineering in terms of complex adaptive systems theory and to argue for the theoretical imperative of adaptive management as the default methodology for an effective low risk means of confronting the inescapable uncertainty and surprise that characterise potential climate futures The book illustrates how a shift from the conventional Enlightenment paradigm of linear reductionist thinking in favour of systems thinking would promote policies that are robust against the widest range of plausible futures rather than optimal only for the most likely and also unlock the policy paralysis caused by making long term predictions of policy outcomes a prior condition for policy formulation It also offers some systems driven reflections on a global governance network for geoengineering This book is a valuable resource for all those with an interest in climate change policy geoengineering and CAS theory including academics under and postgraduate students and policymakers

The Hartwell Approach to Climate Policy Steve Rayner, Mark Caine, 2014-09-19 The Hartwell Approach to Climate Policy presents a powerful critique of mainstream climate change policies and details a set of pragmatic alternatives based on the Hartwell Group's collective writings from 1988-2010 Drawing on a rich history of heterodox but increasingly accepted views on climate change policy this book brings together in a single volume a series of key related texts that define the Hartwell critique of conventional climate change policies and the Hartwell approach to building more inclusive pragmatic alternatives This book tells of the story of how and why conventional climate policy has failed and drawing from lessons learned how it can be renovated It does so by weaving together three strands of analysis First it highlights why the mainstream approach as embodied by the Kyoto Protocol has failed to produce real world reductions in greenhouse gas emissions and delayed real meaningful progress on climate change Second it explores the underlying political economic and technological factors which form the boundary conditions for climate change policy but which are often ignored by policy makers and advocates Finally it lays out a novel approach to climate change guided centrally by the goal of uplifting human dignity worldwide and the recognition that this can only succeed if pursued pragmatically economically and with democratic legitimacy With contributions from leading scholars in the field this work presents a original critique of climate policy and a constructive primer for how to improve it

Handbook of Critical Policy Studies Frank Fischer, Douglas Torgerson, Anna Durnová, Michael Orsini, 2015-12-18 Critical policy studies as illustrated in this Handbook challenges the conventional approaches public policy inquiry But it offers important innovations as well in particular its focus on discursive politics policy argumentation and deliberation and interpretive modes of analysis

Nanotechnology in the Agri-Food Sector Lynn J. Frewer, Willem Norde, Arnout Fischer, Frans Kampers, 2011-02-14 Providing an overview of nanotechnology in the context of agriculture and food science this monograph covers topics such as nano applications in the agri food sector as well as the social and ethical implications Following a review of the basics the book goes on to take an in depth look at processing and engineering encapsulation and delivery packaging crop protection and disease It highlights the technical regulatory and safety aspects of nanotechnology in food science and agriculture while

also considering the environmental impact A valuable and accessible guide for professionals novices and students alike

Marginalized Reproduction Lorraine Culley,Nicky Hudson,Floor van Rooij,2012 This groundbreaking volume is the first to highlight the ways in which diverse ethnic cultural and religious identities affect understanding of technological solutions for infertility and associated treatment experiences The collection begins with a consideration of some of the key methodological challenges for social research on ethnicity and infertility The book introduces and examines concepts of infertility such as the bio medical definition and discusses the companion concept of ethnicity analyzing the shortcomings of simple assessments of ethnicity common in the health literature It also discusses the relationship between the ethnic identity of both researcher and the researched and outlines some of the major issues which can arise in engaging minority ethnic populations in research studies on sensitive topics

The Politics of Asbestos Linda Waldman,2012-08-21 Asbestos use has been growing in many newly industrializing and developing countries of the world and asbestos related diseases are also on the increase This book is based on in depth anthropological fieldwork in the UK India and South Africa looking at people s own understandings of their illness risks and uncertainty compensation and regulation It explores how these personal and community narratives contrast with formal medical and legal understandings how this affects individual people s identities and how they mobilize in order to campaign for compensation regulation and justice Linda Waldman shows how the domination of medical and legal framings of risk and disease over those of workers sufferers and activists can narrow the responses chosen by government This provides important lessons for researchers policy makers and regulators demonstrating that opening up to alternative understandings can create more effective policy responses to move towards sustainability and social justice Publisher s description

Nanotechnology Deb Bennett-Woods,2018-10-03 From manufacturing to medicine nanotechnology implies revolutionary change However the sweeping changes wrought by a technological advance of this magnitude are likely to come at a price that includes unforeseen environmental impact disruptions in industry displacement of workers and deeply controversial applications of the technology and its offspring Nanotechnology Ethics and Society provides a conceptually clear and straightforward ethical framework in which pragmatic questions can be raised regarding the impact of nano related technologies The book focuses on general issues related to nanotechnology in nanomaterials and manufacturing as well as impacts on the marketplace and workforce After an overview of the nanotechnology revolution the text illustrates key concepts in the assessment model and then applies this model to a case study related to human enhancement technologies It also offers an ethical agenda for addressing the challenges of nanotechnology Nanotechnology promises to be the next great technological revolution This important volume provides a framework for deciding how best to take advantage of nanotechnology opportunities while also minimizing the harm of negative effects

Aid, Technology and Development Dipak Gyawali,Michael Thompson,Marco Verweij,2016-12-08 Over the last 50 years Nepal has been considered an experiential model in determining the effectiveness and success of global human

development strategies both in theory and in practice As such it provides a rich array of in depth case studies in both development success and failure This edited collection examines these in order to propose a novel perspective on how human development occurs and how it can be aided and sustained Aid Technology and Development The lessons from Nepal champions plural rationality from both a theoretical and practical perspective in order to challenge and critique the status quo in human development understanding while simultaneously presenting a concrete framework with which to aid citizen and governmental organisations in the galvanization of human development Including contributions by leading international social scientists and development practitioners throughout Nepal this book will be of great interest to students scholars and practitioners working in the field of foreign aid and development studies Experiment Earth Jack Stilgoe,2015-02-20 Experiments in geoen지니어ing intentionally manipulating the Earth s climate to reduce global warming have become the focus of a vital debate about responsible science and innovation Drawing on three years of sociological research working with scientists on one of the world s first major geoen지니어ing projects this book examines the politics of experimentation Geoengineering provides a test case for rethinking the responsibilities of scientists and asking how science can take better care of the futures that it helps bring about This book gives students researchers and the general reader interested in the place of science in contemporary society a compelling framework for future thinking and discussion **Nanotechnology, Risk and Communication** A. Anderson,A. Petersen,C. Wilkinson,S. Allan,2009-02-17 Drawing together insights from media studies sociology and science and technology studies this book is one of the first major studies of media coverage policy debates and public perceptions of nanotechnologies and makes a fascinating and timely contribution to debates about the public communication of science **Handbook of Risk Theory** Sabine Roeser,2012 Risk has become one of the main topics in fields as diverse as engineering medicine and economics and it is also studied by social scientists psychologists and legal scholars But the topic of risk also leads to more fundamental questions such as What is risk What can decision theory contribute to the analysis of risk What does the human perception of risk mean for society How should we judge whether a risk is morally acceptable or not Over the last couple of decades questions like these have attracted interest from philosophers and other scholars into risk theory This handbook provides for an overview into key topics in a major new field of research It addresses a wide range of topics ranging from decision theory risk perception to ethics and social implications of risk and it also addresses specific case studies It aims to promote communication and information among all those who are interested in theoretical issues concerning risk and uncertainty This handbook brings together internationally leading philosophers and scholars from other disciplines who work on risk theory The contributions are accessibly written and highly relevant to issues that are studied by risk scholars We hope that the Handbook of Risk Theory will be a helpful starting point for all risk scholars who are interested in broadening and deepening their current perspectives *Biotechnology and Genetic Engineering* Facts On File, Incorporated,2008 Provides an overview chronology of events glossary and annotated

bibliography on biotechnology and genetic engineering Uncertain Safety ,2009 Floods and fires food safety hazardous materials infectious diseases and many other threats to public health and the environment call for ongoing public alertness However the ways in which these safety risks are currently assessed and managed fall short in addressing the uncertainties of future threats In this vital report the Netherlands Scientific Council for Government Policy provides an exhaustive overview of the political economic and ethical dimensions of various risks and the safety policies aimed at reducing them

Uncertain Safety Alinda Lamein,2025-10-01 Flood prevention food safety transport of hazardous materials infectious diseases the risks posed by new technologies and many other threats to public health and the environment call for ongoing public alertness However the ways in which these safety risks are currently assessed and managed fall short of addressing the uncertainties of future threats The contributors to this essential volume argue that in order to ensure future proof safety policies we should be adopting a new paradigm one based on the precautionary principle i e the notion that the vulnerability of humans society and the natural environment requires a proactive approach to uncertainties In this vital report the Netherlands Scientific Council for Government Policy outlines ways to embody this principle in both private and public law and in various institutional arrangements
