Ship Dynamics for Performance Based Design and Risk Averse Operations Spyros Hirdaris, Tommi Kristian Mikkola, 2021-04-07 More than a century and half ago William Froude and his son Robert 1st 2nd conducted the first scientifically designed towing tank experiments using scaled ship models traveling in calm water or waves. Since then advances in mathematics and technology have led to the development of various methods for the assessment of the dynamic behavior of ships. Yet as we enter the 2nd decade of the 21st century the advent of goal based regulations and the emergence of safe and sustainable shipping standards still confront our ability to understand the fundamentals and assure absolute ship safety in design and operations. To instigate renewed interest in the well rehearsed subject of ship dynamics this Special Issue presents a collection of 12 high quality research contributions with a focus on the prediction and analysis of the dynamic behavior of ships in a stochastic environment. The papers presented are co authored by leading subject matter experts from Europe, the Far East and the USA. These papers will be of interest to academics, practitioners and regulators involved in the progression of ship science, technical services and safety standards.

Engineering of Software Peri L. Tarr, Alexander L. Wolf, 2011-04-07 Software engineering research can trace its roots to a few highly influential individuals. Among that select group is Leon J Osterweil who has been a major force in driving software engineering from its infancy to its modern reality. For more than three decades Prof Osterweil's work has fundamentally defined or significantly impacted major directions in software analysis, development tools and environments and software process, all critical parts of software engineering as it is practiced today. His exceptional contributions to the field have been recognized with numerous awards and honors through his career including the ACM SIGSOFT Outstanding Research Award in recognition of his extensive and sustained research impact and the ACM SIGSOFT Influential Educator Award in recognition of his career long achievements as an educator and

mentor In honor of Prof Osterweil's profound accomplishments this book was prepared for a special honorary event held during the 2011 International Conference on Software Engineering ICSE It contains some of his most important published works to date together with several new articles written by leading authorities in the field exploring the broad impact of his work in the past and how it will further impact software engineering research in the future These papers part of the core software engineering legacy and now available in one commented volume for the first time are grouped into three sections flow analysis for software dependability the software lifecycle and software process

Mathematics in Berlin Heinrich Begehr, Helmut Koch, Jürg Kramer, Norbert Schappacher, Ernst-Jochen Thiele, 1998-07-21 This little book is conceived as a service to mathematicians attending the 1998 International Congress of Mathematicians in Berlin It presents a comprehensive condensed overview of mathematical activity in Berlin from Leibniz almost to the present day without however including biographies of living mathematicians Since many towering figures in mathematical history worked in Berlin most of the chapters of this book are concise biographies These are held together by a few survey articles presenting the overall development of entire periods of scientific life at Berlin Overlaps between various chapters and differences in style between the chapters were inevitable but sometimes this provided opportunities to show different aspects of a single historical event for instance the Kronecker Weierstrass controversy The book aims at readability rather than scholarly completeness There are no footnotes only references to the individual bibliographies of each chapter Still we do hope that the texts brought together here and written by the various authors for this volume constitute a solid introduction to the history of Berlin mathematics
