**Surgical Management of Knee Arthritis** Ajit J. Deshmukh, Bujar H. Shabani, Wenzel Waldstein, Julius K.

Oni, 2024-02-27 The field of adult reconstructive surgery for the treatment of knee arthritis is rapidly advancing. Several paradigms associated with the management of knee arthritis are being challenged and debated, and currently there is no arthroplasty text available that bridges knee alignment options with various implant choices and technological advances available to the knee arthroplasty surgeon. This book focuses on exploring the current technical and technological advances in the surgical management of knee arthritis. It covers various implant options for partial knee replacements (UKA) and primary and revision total knee replacements (TKA) along with various technological advances such as navigation, robotics, patient-specific instrumentation, pressure sensing tibial trays, and customized implants. It also explores surgical algorithms associated with kinematic alignment, mechanical alignment, and revision scenarios with soft tissue and bony defects. A truly international editorship and authorship ensures a wide variety of opinions and approaches from around the world. Generously illustrated with intraoperative photographs, *Surgical Management of Knee Arthritis* presents the latest cutting-edge techniques and technologies on the market for orthopedic surgeons, residents, and fellows. *The Future of the Professions* Richard Susskind, Daniel Susskind, 2022-03-31 This book predicts the decline of today's professions and introduces the people and systems that will replace them. In an internet-enhanced society, according to Richard Susskind and Daniel Susskind, we will neither need nor want doctors, teachers, accountants, architects, the clergy, consultants, lawyers, and many others to work as they did in the 20th century. *The Future of the Professions* explains how increasingly capable technologies, from telepresence to artificial intelligence, will place the practical expertise of the finest specialists at the fingertips of everyone, often at no or low cost and without face-to-face interaction. The authors challenge the grand bargain, the arrangement that grants various monopolies to today's professionals. They argue that our current professions are antiquated, opaque, and no longer affordable, and that the expertise of their best is enjoyed only by a few. In their place, they propose five new models for producing and distributing expertise in society. The book raises profound policy issues, not least about employment; they envisage a new generation of open-collared workers and, about control over online expertise, they warn of new gatekeepers in an era when machines become more capable than human beings at most tasks. With a new preface exploring recent critical developments, this updated edition builds on the authors' groundbreaking research into more than a dozen professions. Illustrated with numerous examples from each, this is the first book to assess and question the relevance of the professions in the 21st century.
