

Verify condition (7.4.11) for the validity of (7.4.10).

The field of the spherical-wave solution (7.4.6) on the plane  $z = R$  in the vicinity of  $(x = 0, y = 0)$  is therefore

$$\mathcal{E}(\mathbf{r}) = \frac{A}{R} e^{ikR} e^{ik(x^2+y^2)/2R}, \quad (7.4.10)$$

at points for which (7.4.8) is satisfied. Note that we have simply replaced  $r$  by  $R$  for the approximate evaluation of the factor  $A/r$  in (7.4.6). In the factor  $e^{ikr}$ , however, we have retained in (7.4.10) both terms on the right-hand side of (7.4.9). This is

**Whitaker's Books in Print**, 1998      **The British National Bibliography** Arthur James Wells, 1993      Government Reports Index, 1972      *Government Reports Annual Index*, 1988      **Problems in Laser Physics** G. Cerullo, 2001-10-31

This book examines problems typically encountered in the laser field After initial exercises related to general aspects of laser physics subsequent problems are organized in chapters on interactions of radiation with matter wave propagation in optical media and optical resonators optical and electrical pumping processes and systems continuous wave and transient laser behaviors properties of the output beam and beam transformation by amplification frequency conversion and pulse compression or expansion and solid state dye semiconductor gas and X ray lasers Hints for solving problems are given and solutions are presented at the ends of chapters The editors are affiliated with Politecnico di Milano Italy This work lacks a subject index c Book News Inc      **Problems in Laser Physics** Giulio Cerullo, Stefano Longhi, Mauro Nisoli, 2001-10-31 This book presents the first comprehensive collection of solved problems in laser physics covering both fundamental and applied aspects of laser science and technology The framework of the book including structuring of topics and notations closely follows that adopted in the *Principles of Laser* book by Professor O Svelto The collection of problems presented in this book appears therefore a natural complement to Svelto's textbook for testing and developing the skills acquired in the reading of the theory however it may also be a useful support to any general textbook on laser physics wherein problems are usually not solved in detail We remark that this is to our knowledge the first book to provide a complete and satisfactory set of solved problems in such a highly developing field of science and technology The problems fall mainly into three distinct categories i numerical applied problems which help the reader to become confident and familiar with the basic concepts and methods of laser physics and to acquire a feeling for numerical parameters entering in real world laser systems ii complementary problems that present in detail demonstrations of some analytical parts not given in the textbook and iii advanced problems aimed either to provide a deeper understanding of the subject or to cover more recent developments in the field Audience This book is primarily intended for undergraduate and graduate students in physics engineering and chemistry However it may also be a useful tool for industrial professionals working in the field of laser technologies and laser applications as well as for researchers interested in basic aspects of real world lasers and related fields      **Solved Problems in Laser Physics** N.
