Reality Bobby Azarian,2022-06-28 Why do we exist For centuries this question was the sole province of religion and philosophy But now science is ready to take a seat at the table According to the prevailing scientific paradigm the universe tends toward randomness it functions according to laws without purpose and the emergence of life is an accident devoid of meaning But this bleak interpretation of nature is currently being challenged by cutting edge findings at the intersection of physics biology neuroscience and information theory generally referred to as complexity science Thanks to a new understanding of evolution as well as recent advances in our understanding of the phenomenon known as emergence a new cosmic narrative is taking shape Nature s simplest parts come together to form ever greater wholes in a process that has no end in sight In The Romance of Reality cognitive neuroscientist Bobby Azarian explains the science behind this new view of reality and explores what it means for all of us In engaging accessible prose Azarian outlines the fundamental misunderstanding of thermodynamics at the heart of the old assumptions about the universe s evolution and shows us the evidence that suggests that the universe is a self organizing system one that is moving toward increasing complexity and awareness Cosmologist and science communicator Carl Sagan once said of humanity that we are a way for the cosmos to know itself The Romance of Reality shows that this poetic statement in fact rests on a scientific foundation and gives us a new way to know the cosmos along with a riveting vision of life that imbues existence with meaning nothing supernatural
