Handbook of Nonwoven Filter Media Irwin M. Hutten, 2015-10-24 The Handbook of Nonwoven Filter Media Second Edition provides readers with a fundamental understanding of nonwoven filter media. It is one of the few books dealing exclusively with the subject and is primarily intended as a reference for people in the nonwovens industry and academic researchers, technical marketing and quality control personnel, and universities offering courses in filtration theory and practice and nonwovens technology. The book includes applications for gas, liquid, and engine filtration and identifies the types of filter media used in these applications. The various separation technologies that can be achieved with nonwoven filter media are revealed and discussed. Theoretical presentation is based on flow through porous media and is developed around a nonwovens or engineered fabrics orientation. Presents the latest information on legislative, regulatory, environmental, and sustainability issues affecting the nonwovens and filtration industries. Includes a comprehensive discussion of Computational Flow Dynamics (CFD) by Dr. George Chase, University of Akron, USA. Includes the latest Global and North American marketing statistics for filters and filter media prepared by Brad Kalil of INDA.

Pollution Control Handbook for Oil and Gas Engineering Nicholas P. Cheremisinoff, 2016-04-20 This is a major new handbook that covers hundreds of subjects that cross numerous industry sectors; however, the handbook is heavily slanted to oil and gas environmental management, control, and pollution prevention and energy-efficient practices. Multi-media pollution technologies are covered: air, water, solid waste, energy. Students, technicians, practicing engineers, environmental engineers, environmental managers, chemical engineers, petroleum engineers, and environmental attorneys are all professionals who will benefit from this major new reference source. The handbook is organized in three parts. Part A provides an extensive compilation of abbreviations and a concise glossary of pollution control and engineering terminology. More than 400 terms are defined. The section is intended to provide a simple look-up guide to confusing terminology used in the regulatory field as well as industry jargon. Cross-referencing between related definitions and acronyms are provided to assist the user. Part B provides physical properties and chemical safety information. This part is not intended to be exhaustive; however, it does provide supplemental information that is useful to a number of the subject entries covered in the main body of the handbook. Part C is the Macropedia of Subjects. The part is organized as alphabetical subject entries for a wide range of pollution controls, technologies, pollution prevention practices, and tools, computational methods for preparing emission estimates and emission inventories, and much more. More than 100 articles have been prepared by the author, providing a concise overview of each subject, supplemented by sample calculation methods and examples where appropriate and references. Subjects included are organized and presented in a macropedia format to assist a user in gaining an overview of the subject, guidance on performing certain calculations or estimates as in cases pertinent to preliminary sizing and selection of pollution controls, or in preparing emissions inventories for reporting purposes and recommended references, materials, and web sites for more in-depth information, data, or computational tools.

Each subject entry provides a working overview of the technology practice piece of equipment regulation or other relevant issue as it pertains to pollution control and management Cross referencing between related subjects is included to assist the reader to gain as much of a practical level of knowledge
