The EU and Nanotechnologies

Tanja Ehnert, 2017-08-10 This book investigates the role of law in confronting major societal transformations embodied by the emergence of nanotechnologies. Taking the case of the European Union, it explores who the key decision makers in the regulation of nanotechnologies are and how they take decisions. The questions are explored through two distinct case studies: the food and chemicals sectors. The book charts an incremental retreat of the European Union to its executive powers, including soft law measures such as agencies' guidelines or implementing measures. This, the author argues, results in the Union's fundamental democratic control mechanisms, the EU legislature and the Court of Justice of the EU, being circumvented. The book recommends several immediate proposals to reform EU risk regulation, advocating a greater reliance on the European Parliament and outlining measures to increase the transparency of guidance drafting by EU agencies. This important work provides a timely examination of how emerging technologies pose both regulatory and democratic challenges.

Biopolymeric Nanoparticles for Agricultural Applications Kamel A. Abd-El Salam, Ayat F. Hashim, Farah K. Ahmed, Sabu Thomas, 2024-10-22 Biopolymers are polymers that are naturally sourced from renewable resources such as plants, animals, and microorganisms. These polymers are gaining increasing attention due to their biodegradability, biocompatibility, and non-toxicity, making them an attractive alternative to traditional synthetic polymers. *Biopolymeric Nanoparticles for Agricultural Applications* focuses on the use of biopolymeric nanoparticles for various agricultural purposes. It explores the potential of these nanoparticles in improving crop productivity, enhancing soil quality, and reducing the environmental impact of agricultural practices. Biopolymeric nanoparticles have gained significant attention in recent years as a promising technology for various agricultural applications, such as crop protection, nutrient delivery, and soil remediation. These nanoparticles are typically made from biodegradable and biocompatible materials such as chitosan, alginate, and starch, and offer several advantages over conventional agricultural formulations, including improved stability, controlled release, and enhanced efficacy. This book provides a comprehensive overview of recent advances in the design, synthesis, characterization, and application of biopolymeric nanoparticles in agriculture. It discusses the various biopolymeric nanoparticles that can be utilized in agriculture, such as chitosan, cellulose, starch, and protein-based nanoparticles. It delves into their properties, synthesis methods, and characterization techniques. The primary purpose of this book is to provide a comprehensive understanding of the applications of biopolymeric nanoparticles in agriculture. It bridges the gap between the fields of nanotechnology and agriculture, offering insights into the potential benefits and challenges associated with their use.

Rivière, 2012-06-12 The

techniques and methods that can be applied to materials characterization on the microscale are numerous and well established. Divided into two parts, *Characterization of Nanostructures* provides thumbnail sketches of the most widely used techniques and methods that apply to nanostructures and discusses typical applications to single nanoscale objects as well as to ensembles of such objects. Section I, *Techniques and Methods*, overviews the physical principles of the main techniques and describes those operational modes that are most relevant to nanoscale characterization. It provides sufficient technical detail so that readers and prospective users can gain an appreciation of the strengths and limitations of particular techniques. The section covers both mainstream and less commonly used techniques. Section II, *Applications of Techniques to Structures of Different Dimensionalities and Functionalities*, deals with the methods for materials characterization of generic types of systems using carefully chosen illustrations from the literature. Each chapter begins with a brief description of the materials and supplies a context for the methods for characterization. The volume concludes with a series of flow charts and brief descriptions of tactical issues. The authors focus on the needs of the research laboratory but also address those of quality control, industrial troubleshooting, and online analysis. *Characterization of Nanostructures* describes those techniques and their operational modes that are most relevant to nanoscale characterization. It is especially relevant to systems of different dimensionalities and functionalities. The book builds a bridge between generalists who play vital roles in the post disciplinary area of nanotechnology and specialists who view themselves as more in the context of the discipline.

Handbook of Analysis of Edible Animal By-Products Leo M.L. Nollet, Fidel Toldra, 2011-04-01 While muscle foods are the more commonly consumed portion of an animal, animal by products such as the entrails and internal organs are also widely consumed. This handbook, unique in the world, provides food scientists with a full overview of the tools available for the analysis of these by products. Known for their superior handbooks on processed meats and poultry, muscle, meat, dairy, and seafood, editors Nollet and Todra take the same comprehensive approach. They bring together leading experts who look at the techniques and methodologies for analyzing nutritional and sensory qualities as well as safety, including the detection of pathogens and toxins usually found in muscle foods.

REACH and the Environmental Regulation of Nanotechnology Nertila Kuraj, 2019-07-23 REACH and the Environmental Regulation of Nanotechnology presents a thorough and comprehensive legal analysis on the status of nanoscale chemicals under the EU's REACH Registration, Evaluation, Authorisation, and Restriction regulation, asking whether it effectively safeguards human health and environmental protection. This book examines the European Commission's claim that REACH offers the best possible framework for the risk management of nanomaterials. Through a detailed and meticulous analysis of the four phases of REACH, Kuraj assesses the capacity of the Regulation to protect human health and the environment against the potential harms associated with exposure to nanomaterials and draws attention to the ways in which the specificities of nanoscale chemicals are not tackled by the current REACH framework. Overall, this book is an innovative and timely contribution to the ongoing debate on how to
