Structuring the Thesis David Kember, Michael Corbett, 2018-07-23 The book is a collective investigation of the structuring of theses in education the social sciences and other disciplines that commonly do not follow the standard procedures of the scientific method To help research students design a structure for their own thesis and liberate their investigations from the constraints associated with the use of the conventional structure it explains how the structures adopted were designed to suit the topic methodology and paradigm It also provides a wide range of examples to draw upon which suit a broad spectrum of theory methodological approaches research methods and paradigms Additionally by analyzing the methodologies and paradigms and reviewing the methodological and paradigmatic spectrum it offers a significant contribution to the way research is conceptualized The book addresses a number of key questions faced by students supervisors and examiners Why do examiners often find it difficult to read work in non scientific disciplines when theses are structured in accordance with the conventional scientific method Why do students in non scientific disciplines struggle to write up the outcomes of their research in the conventional structure What alternative thesis structures can be devised to better suit the wide range of methods Which theories and paradigms are commonly followed in education and the social sciences and how do these perspectives influence the research process What methods theories and paradigms are commonly adopted by education and social science students and what problems do these pose when students write their theses

theoretically and empirically informed analyses of these developments This book was originally published as a special issue of the Journal of Education Policy

Learning Standards and the Assessment of Quality in Higher Education: Contested Policy Trajectories Jon Yorke, Lesley Vidovich, 2016-07-13 This book analyses accountability and quality policies relating to learning standards and examines their implications for assessment in higher education Whilst primarily focusing on the Australian setting this analysis is located within a broader frame of reference that includes the United Kingdom UK the United States of America US and the Organisation for Economic Cooperation and Development OECD Across these settings comparative measures of learning have been seen as a policy solution to the problem of proving quality in a globalised and increasingly competitive higher education market Comparative measures of learning depend on the specification of learning standards Learning standards attempt to articulate the capabilities expected of graduates and students achievement of these is determined through the practices of assessment carried out within institutions Quality policy learning standards and assessment practices all intersect within the broader umbrella of accountability with relevance to governments higher education providers employers parents and students The findings reported in this book highlight a number of policy influences including the rising demands for national and international comparative data on learning standards to compare quality and inform student choice in a globally competitive market

The Quantified School Diego Santori, 2024-01-09 This book develops a theoretically rich analysis of quantification and subjectivity tracing new linkages between educational policy and everyday life in schools diving deeper into ordinary schools as they encounter and navigate quantified forms of recognition With a focus on Chile as a critical case of neoliberal experimentation this book investigates whether intense exposure to quantified forms of meaning and sense making in school settings could develop into metrics driven dispositions or attachments Contemporary demands on schools for calculation prediction and comparison by the use of accountability tools like high stakes testing league tables consequential inspection ratings and progress measures evidence the relentless presence of quantification in teaching and learning This book argues the importance of bridging political sociological and anthropological literatures together with affect and subjectivity theories to understand the complex ways in which standardisation optimisation automation and surveillance crystallise into quantification based forms of intelligibility

Digital Disruption in Teaching and Testing Claire Wyatt-Smith, Bob Lingard, Elizabeth Heck, 2021-04-28 This book provides a significant contribution to the increasing conversation concerning the place of big data in education Offering a multidisciplinary approach with a diversity of perspectives from international scholars and industry experts chapter authors engage in both research and industry informed discussions and analyses on the place of big data in education particularly as it pertains to large scale and ongoing assessment practices moving into the digital space This volume offers an innovative practical and international view of the future of current opportunities and challenges in education and the place of assessment in this context
