**Space Mining and Manufacturing** Davide Sivoletta, 2019-12-05 This book produces convincing evidence that exploiting the potential of space could help solve many environmental and social issues affecting our planet such as pollution overcrowding resource depletion and conflicts economic inequality social unrest economic instability and unemployment It also touches on the legal problems that will be encountered with the implementation of the new technologies and new laws that will need to be enacted and new organizations that will need to be formed to deal with these changes This proposition for a space economy is not science fiction but well within the remit of current or under development technologies Numerous technologies are described and put together to form a coherent and feasible road map that if implemented could lead humankind towards a brighter future Scientific and Technical Aerospace Reports ,1994 Moon Viorel

Badescu, 2012-03-22 The Earth has limited material and energy resources Further development of the humanity will require going beyond our planet for mining and use of extraterrestrial mineral resources and search of power sources The exploitation of the natural resources of the Moon is a first natural step on this direction Lunar materials may contribute to the betterment of conditions of people on Earth but they also may be used to establish permanent settlements on the Moon This will allow developing new technologies systems and flight operation techniques to continue space exploration In fact a new branch of human civilization could be established permanently on Moon in the next century But meantime an inventory and proper social assessment of Moon s prospective energy and material resources is required This book investigates the possibilities and limitations of various systems supplying manned bases on Moon with energy and other vital resources The book collects together recent proposals and innovative options and solutions It is a useful source of condensed information for specialists involved in current and impending Moon related activities and a good starting point for young researchers

**New Views of the Moon** Bradley L. Jolliff, Mark A. Wieczorek, Charles K. Shearer, Clive R. Neal, 2018-12-17 Volume 60 of *Reviews in Mineralogy and Geochemistry* assesses the current state of knowledge of lunar geoscience given the data sets provided by missions of the 1990 s and lists remaining key questions as well as new ones for future exploration to address It documents how a planet or moon other than the world on which we live can be studied and

understood in light of integrated suites of specific kinds of information The Moon is the only body other than Earth for which we have material samples of known geologic context for study This volume seeks to show how the different kinds of information gained about the Moon relate to each other and also to learn from this experience thus allowing more efficient planning for the exploration of other worlds      Energy: a Continuing Bibliography with Indexes ,1976      *Government Reports Annual Index* ,1993      **Lunar Sourcebook** Grant Heiken,David Vaniman,Bevan M.
