Stelzer,2012-07-03 EVALUATION OF OCEAN ENERGY CONVERSION BASED ON LINEAR GENERATOR CONCEPTS As the world continues to demand greater productivity and lifestyle enrichment through technological advancements the demand for electrical power is predicted to escalate dramatically Thus far this increased demand has been primarily supplied from fossil fueled plants Unfortunately the burning of fossil fuels produce harmful carbon dioxide pollution as a by product It has been hypothesized that unless a clean renewable and efficient alternate source of energy is found soon the world may either exhaust its supplies of energy producing materials or drastically degrade its environment However motions that occur naturally such as ocean waves can play a significant role in generating environmentally safe and economically viable energy for human utilization The focus of this work predicts the electrical power generation capabilities from a seabed mounted linear generator tethered to a floating buoy heaving under the influence of passing ocean surface waves Mathematical models are introduced which simulate the oceans surface conditions under both the regular basic and irregular natural wave regimes the heave vertical displacement response for a floating buoy and the resulting electrical output parameters of the linear generator Within these models various physical and electrical parameters are altered in an attempt to generate a greater output power for a given sea state condition making the Wave Energy Converter WEC more efficient It is shown theoretically that the buoy can be designed to have a greater heave response than that of the height of a passing wave resulting in an increase in generated power from the linear generator Author Information Dr Michael A Stelzer is a Certified Project Manager and Senior Electronic Technician with a Ph D in Electrical and Computer Engineering During his career to date Mr Stelzer has published four additional educational titles and has been admitted into Cambridge Who s Who top 101 industry experts *Sustainable Biofloc Systems for Marine Shrimp* Tzachi Matzliach Samocha,2019-07-25 Sustainable Biofloc Systems for Marine Shrimp describes the biofloc dominated aquaculture systems developed over 20 years of research at Texas A M AgriLife Research Mariculture Laboratory for the nursery and grow out production of the Pacific White Shrimp *Litopenaeus vannamei* The book is useful for all stakeholders with special attention given to entrepreneurs interested in building a pilot biofloc dominated system In addition to the content of its 15 chapters that cover topics on design operation and economic analysis the book includes appendices that expand on relevant topics links to Excel sheets that assist in calculations and video links that illustrate important operations tasks Presents the most recent trials on nursery gross out of *L vannamei* Includes a discussion of site selection equipment options and water sources Provides a step by step guides from tank preparation to feeding and harvest *Online Teaching at Its Best* Linda B. Nilson,Ludwika A. Goodson,2021-05-13 Bring pedagogy and cognitive science to online learning environments Online Teaching at Its Best Merging Instructional Design with Teaching and Learning Research

2nd Edition is the scholarly resource for online learning that faculty instructional designers and administrators have raved about. This book addresses course design, teaching, and student motivation across the continuum of online teaching modes: remote, hybrid, hyflex, and fully online, integrating these with pedagogical and cognitive science and grounding its recommendations in the latest research. The book will help you design or redesign your courses to ensure strong course alignment and effective student learning in any of these teaching modes. Its emphasis on evidence-based practices makes this one of the most scholarly books of its kind on the market today. This new edition features significant new content, including more active learning formats for small groups across the online teaching continuum, strategies and tools for scripting and recording effective micro lectures, ways to integrate quiz items within micro lectures, more conferencing software and techniques to add interactivity, and a guide for rapid transition from face-to-face to online teaching. You'll also find updated examples, references, and quotes to reflect more evolved technology. Adopt new pedagogical techniques designed specifically for remote, hybrid, hyflex, and fully online learning environments. Ensure strong course alignment and effective student learning for all these modes of instruction. Increase student retention, build necessary support structures, and train faculty more effectively. Integrate research-based course design and cognitive psychology into graduate or undergraduate programs. Distance is no barrier to a great education. *Online Teaching at Its Best* provides practical, real-world advice grounded in educational and psychological science to help online instructors, instructional designers, and administrators deliver an exceptional learning experience even under emergency conditions.

Integrated Power Devices and TCAD Simulation Yue Fu, Zhanming Li, Wai Tung Ng, Johnny K.O. Sin, 2017-12-19. From power electronics to power integrated circuits, PICs, smart power technologies, devices, and beyond. *Integrated Power Devices and TCAD Simulation* provides a complete picture of the power management and semiconductor industry. An essential reference for power device engineering students and professionals, the book not only describes the physics inside integrated power semiconductor devices such as lateral double diffused metal oxide semiconductor field effect transistors, LDMOSFETs, lateral insulated gate bipolar transistors, LIGBTs, and super junction LDMOSFETs, but also delivers a simple introduction to power management systems. Instead of abstract theoretical treatments and daunting equations, the text uses technology computer-aided design (TCAD) simulation examples to explain the design of integrated power semiconductor devices. It also explores next-generation power devices such as gallium nitride power high electron mobility transistors, GaN power HEMTs. Including a virtual process flow for smart PIC technology as well as a hard-to-find technology development organization chart, *Integrated Power Devices and TCAD Simulation* gives students and junior engineers a head start in the field of power semiconductor devices while helping to fill the gap between power device engineering and power management systems.
