Human Settlements and Planning for Ecological Sustainability Keith Pezzoli, 2000. In many areas of the world, environmental degradation in and around human settlements is undermining prospects for both socioeconomic justice and ecological sustainability. To explore the issues involved in this worldwide problem, Keith Pezzoli focuses on a dramatic instance of conflict that grew out of the unauthorized penetration of human settlements into the Ajusco greenbelt zone, a vital part of Mexico City's ecological reserve. The heart of the book is the story of what happened when residents of the Ajusco settlements fought relocation by proposing that the areas be transformed into productive ecology settlements. Pezzoli draws upon urban and regional planning theory and practice to examine biophysical as well as ethical and social sides of the story, and he uses the Mexican experience to identify planning strategies to link economy, ecology, and community in sustainable development. **Managing Common Pool Groundwater Resources** Mary Brentwood, Stephen Robar, 2004-03-30. Worldwide developed and developing countries increasingly depend on groundwater resources for domestic water supply. Since groundwater is a hidden resource and individuals cannot see how much has been used and what is left, this book attempts to make global groundwater use more visible so that policy makers can make informed decisions as to its management. Organized into six geographical regions, the authors describe the various physical, cultural, and institutional challenges of groundwater policy and management faced by countries worldwide. Analysis of the challenges and responses to groundwater management at the national level hopes to generate a broader understanding for societies across the globe. Each chapter provides the physical geography and demographics of the country, its water use problems, law, politics, and policy, and future implications. Chapters on representative countries within North America, Western and Eastern Europe, the Middle East, Australia, and China, and Africa provide a comprehensive perspective of groundwater issues internationally.

Our Common Journey National Research Council, Policy and Global Affairs, Policy Division, Board on Sustainable Development, 1999-11-09. World human population is expected to reach upwards of 9 billion by 2050 and then level off over the next half century. How can the transition to a stabilizing population also be a transition to sustainability? How can science and technology help to ensure that human needs are met while the planet's environment is nurtured and restored? Our Common Journey examines these

momentous questions to draw strategic connections between scientific research technological development and societies efforts to achieve environmentally sustainable improvements in human well being The book argues that societies should approach sustainable development not as a destination but as an ongoing adaptive learning process Speaking to the next two generations it proposes a strategy for using scientific and technical knowledge to better inform future action in the areas of fertility reduction urban systems agricultural production energy and materials use ecosystem restoration and biodiversity conservation and suggests an approach for building a new research agenda for sustainability science Our Common Journey documents large scale historical currents of social and environmental change and reviews methods for what if analysis of possible future development pathways and their implications for sustainability The book also identifies the greatest threats to sustainability in areas such as human settlements agriculture industry and energy and explores the most promising opportunities for circumventing or mitigating these threats It goes on to discuss what indicators of change from children s birth weights to atmosphere chemistry will be most useful in monitoring a transition to sustainability
