Food Flavour Technology Andrew J. Taylor, Robert S. T. Linforth, 2009-12-15 Food flavour technology is of key importance for the food industry Increasingly food products must comply with legal requirements and conform to consumer demands for natural products but the simple fact is that if foods do not taste good they will not be consumed and any nutritional benefit will be lost There is therefore keen interest throughout the world in the production utilisation and analysis of flavours The second edition of this successful book offers a broad introduction to the formulation origins analysis and performance of food flavours updating the original chapters and adding valuable new material that introduces some of the newer methodologies and recent advances The creation of flavourings is the starting point for the book outlining the methodology and constraints faced by flavourists Further constraints are considered in a chapter dealing with international legislation The origins of flavours are described in three chapters covering thermal generation biogenesis and natural sources keeping in mind the adjustments that manufacturers have had to make to their raw materials and processes to meet the demand for natural products whilst complying with cost issues Delivery of flavours using encapsulation or through an understanding of the properties of the food matrix is described in the next two chapters and this section is followed by chapters describing the different ways to analyse flavours using instrumental modelling and sensory techniques The book is aimed at food scientists and technologists ingredients suppliers quality assurance personnel analytical chemists and biotechnologists

Bioactive Compounds in Foods John Gilbert, Hamide Şenyuva, 2009-01-21 Inherent toxicants and processing contaminants are both non essential bioactive substances whose levels in foods can be difficult to control This volume covers both types of compound for the first time examining their beneficial as well as their undesirable effects in the human diet Chapters have been written as individually comprehensive reviews and topics have been selected to illustrate recent scientific advances in understanding of the occurrence and mechanism of formation exposure risk assessment and developments in the underpinning analytical methodology A wide range of contaminants are examined in detail including pyrrolizidine alkaloids glucosinolates phycotoxins and mycotoxins Several process contaminants eg acrylamide and furan which are relatively new but which have a rapidly growing literature are also covered The book provides a practical reference for a wide range of experts specialist toxicologists chemists and food chemists hygienists government officials and anyone who needs to be aware of the main issues concerning toxicants and process contaminants in food It will also be a valuable introduction to the subject for post graduate students

Food Biodeterioration and Preservation Gary S. Tucker, 2008-04-30 Biodeterioration can be defined as the breakdown of food by agents of microbiological origin either directly or from products of their metabolism Microbiological sources can be present in foods prior to packaging or on the surfaces of packaging materials The shelf life and safety of the food will depend on the type and quantity of microorganism as well as the hurdles to their growth offered by various preservation techniques This book discusses how the agents of food biodeterioration operate and examines the commercially used industrial methods available to control them allowing the production of safe and wholesome foods There is an emphasis on the equipment employed to carry out the various methods of preservation The introductory chapter describes in detail the microorganisms and mechanisms of food breakdown intrinsic to various key food types dairy meat and fish fruit and vegetables Direct microorganism action will be covered in addition to enzymatic breakdown The second chapter addresses HACCP including food safety legislation Subsequent chapters outline the principal commercially used methods of preserving foods These chapters follow a common structure theoretical background flow sheets of operations food preparation processing equipment special features of hygiene packaging shelf life and product safety Food Biodeterioration and Preservation is directed at food scientists and technologists in industry and academia Since it covers all the commonly used methods of food preservation it will be relevant across the entire food manufacturing industry

Case Studies in Food Microbiology for Food Safety and Quality Rosa K Pawsey, 2007-10-31 This unique book covers the key issues relating to the control and management of the most commonly occurring food borne bacteria which compromise the safety and quality of food The 21 case studies drawn from a wide range of sources present real life situations in which the management of food borne pathogens failed or was at risk of failure Each chapter contains a case study which is supported

by relevant background information such as diagrams tables of data etc study questions and a subsequent feedback commentary all of which encourage the reader to apply their knowledge With reference to specific organisms such as E coli Salmonella Listeria monocytogenes and so on the chapters move the reader progressively from strategies for control of food borne organisms techniques for their control appreciating risk through sampling criteria and acceptance to managing risk With the provision of real life problems to explore along with the opportunity to propose and justify approaches to managing food safety this book will be welcomed as a new approach to learning not only by students and their teachers but also by food professionals in policy making and enforcement and the many within the food industry who are involved with the management of food safety

Functional Food Product Development Jim Smith,Edward Charter,2010-06-28 According to an August 2009 report from PricewaterhouseCoopers the United States market for functional foods in 2007 was US 27 billion Forecasts of growth range from between 8 5% and 20% per year or about four times that of the food industry in general Global demand by 2013 is expected to be about 100 billion With this demand for new products comes a demand for product development and supporting literature for that purpose There is a wealth of research and development in this area and great scope for commercialization and this book provides a much needed review of important opportunities for new products written by authors with in depth knowledge of as yet unfulfilled health related needs This book addresses functional food product development from a number of perspectives the process itself health research that may provide opportunities idea creation regulation and processes and ingredients It also features case studies that illustrate real product development and commercialization histories Written for food scientists and technologists this book presents practical information for use in functional food product development It is an essential resource for practitioners in functional food companies and food technology centres and is also of interest to researchers and students of food science Key features A comprehensive review of the latest opportunities in this commercially important sector of the food industry Includes chapters highlighting functional food opportunities for specific health issues such as obesity immunity brain health heart disease and the development of children New technologies of relevance to functional foods are also addressed such as emulsion delivery systems and nanoencapsulation Includes chapters on product design and the use of functional ingredients such as antioxidants probiotics and prebiotics as well as functional ingredients from plant and dairy sources Specific examples of taking products to market are provided in the form of case studies e g microalgae functional ingredients Part of the Functional Food Science and Technology book series Series Editor Fereidoon Shahidi

Practical Food Rheology Ian T. Norton,Fotios Spyropoulos,Philip Cox,2010-12-01 Rheology is fundamentally important in food manufacturing in two major senses Understanding the way in which a substance moves and behaves is essential in order to be able to transport and mix it during processing Secondly the rheology of a product dictates much of the consumer experience e g in relation to texture and mouthfeel This book doesn t overwhelm the reader with complex mathematical equations but takes a simple and practically

focused approach interpreting the implications of rheological data for use in different food systems Through this approach industry based food developers rheologists students and academics are given clear concise interpretation of rheological data which directly relates to actual perceived functionality in the food The functionality may relate to texture structure and mouthfeel and may result as a function of temperature pH flocculation concentration effects and mixing The interpretative view is based on the principle that the food rheologist will produce a graph for example of viscosity or gelation profiling and then have to extract a practical meaning from it For example if viscosity falls with time as a function of pH this knowledge can be used to tell the customer that the viscosity can be followed with just a pH meter and a stopwatch Rheological measurements have shown that once the pH has dropped 1 unit after 10 minutes the viscosity has been halved This is the type of practical and valuable information for customers of the industrial food rheologist which the book will enable readers to access Key features A uniquely practical approach to the often difficult science of food rheology Includes chapters introducing the basics of food rheology before moving on to how data can be usefully and easily interpreted by the food scientist Can be used as a teaching aid on academic or industry based courses
