Opening Pandoras Box A Sociological Analysis Of Scientists Discourse:

Opening Pandora's Box G. Nigel Gilbert, Michael Mulkay, 1984-02-23 This book proposes a fresh approach to sociological analysis and in particular to the analysis of scientific culture It moves away from previous studies which have tended to focus on scientists actions and beliefs to show that analysis of scientific discourse can be productive and revealing The book demonstrates that scientists produce varying accounts of their actions and beliefs in different social situations Rather than attempting to extract one coherent interpretation from these diverse accounts the study identifies two basic scientific repertoires and shows how scientists use them to create their discourse This provides a point of departure for more complex analytical topics Discourse analysis is applied to show how different degrees of consensus can be ascribed to the same group of scientists at a given moment in time through the application of standard interpretive techniques Finally discourse analysis is used to explore scientists humour a neglected topic that is shown to provide important insights into the normally hidden interpretive regularities which underlie the cultural diversity of science **Research Design** Catherine Hakim, 2012-11-12 Providing a practical overview for graduates and professional researchers this book highlights the central issues involved in the design of medium to large scale social and economic research Covering both theoretical and policy research Hakim sets out the key features strengths and limitations of eight main types of study with illustrations from real life research of the kinds of questions each can best be used to answer This book also offers a more general pragmatic discussion of strategies for choosing between one design and another and on how different types of study can be successfully combined in wider ranging research programmes In this expanded second edition the author has added new material on areas of contemporary significance across the social and economic sciences New features to this edition are a chapter on cross national comparative studies more examples throughout the text of comparative research both within Europe and across modern societies discussions of student theses advocacy research selection effects and collaboration **Teaching, learning and classroom discourse** Derek Edwards, 1997 **Harold Garfinkel** Michael Lynch, Wes Sharrock, 2003-05-02 Harold Garfinkel is one of a handful of sociologists to have founded a major sociological research programme He coined the term ethnomethodology that still continues to be taken up in the social science today This set discusses Garfinkel s intellectual biography and critically reviews his contribution **Arts & Humanities Citation Index**, 1988 A multidisciplinary index covering the journal literature of the arts and humanities It fully covers 1 144 of the world s leading arts and humanities journals and it indexes individually selected relevant items from over 6 800 major science and social science journals **Ensaio fora do tubo** Luis David Castiel, 2021-01-01 Os muitos desafios e crises que marcam os tempos pandemicos podem ser narrados por meio de recursos diversos As figuras de linguagem incluindo a ironia a alus o o paradoxo as ambiguidades o exerc cio da cr tica e at mesmo o humor e o al vio c mico s o alguns desses v rios recursos presentes neste ensaio em forma de livro Escrita por Luis David Castiel pesquisador aposentado da Escola Nacional de Sa de P blica Sergio

The Word and the World MICHAEL. MULKAY,2024 First published in 1985 The Word and the World is a significant empirically based contribution to the sociological analysis of scientists discourse and scientific culture It also offers a radical departure from established forms of sociological discourse which has far reaching implications for all areas of sociological study The central aim of this book is to widen the range of textual forms used in empirical sociological research and thereby to increase sociologists ability to furnish interesting valid and practically useful conclusions The unusual textual forms employed for the purposes of sociological analysis are the play the investigative inquiry the participant analyst dialogue and the parody One of the main substantive topics that provides the material for these explorations in form is the scientific debate This book will be of interest to students of sociology rhetoric linguistics and science

Re-crafting Rationalization Simon Locke,2016-03-23 Re crafting Rationalization contributes to debates relating to the public understanding of science regarding the conceptualization of the relationship between science and the public It challenges the prevailing science centred or top down framework that currently informs notions of public engagement and knowledge transfer offering an alternative that remains firmly grounded in the discourse of classical social theory By proposing an alternative version of rationalization to the standard interpretation of Weber s disenchantment thesis this book establishes the public understanding of science as a matter of fundamental sociological concern As such it redefines this field to emphasize public meanings of science engaging with a range of topics of major interest to the public and popular meaning of science including science and religion science fiction and fantasy fringe science and media representations of science Combining rhetorical analysis with ethnomethodology and membership categorization analysis the book outlines the basis of a new approach to the sociology of knowledge in the light of which Weber s rationalization thesis is radically re crafted in relation to studies of scientists discourse the rhetoric of science popularization and public usages of science This re crafted rationalization is applied in a series of detailed empirical studies of enchanted science creationism and intelligent design Scientology and reflexive spirituality superhero comics and mundane mysteries Fortean discourse conspiracy theory and media representations of the scientist in the case of Jack the Ripper Re crafting Rationalization therefore redresses a significant shortcoming in contemporary social theory which currently overlooks or misrepresents important public meanings of science whilst excluding popular culture from attention With profound implications for the ways in which we make sense of developments involving science this book will be of interest not only to sociologists and social theorists but also to those

interested in popular culture and subcultures and the history philosophy and sociology of science **Science As Power** Stanley Aronowitz, Science has established itself as not merely the dominant but the only legitimate form of human knowledge By tying its truth claims to methodology science has claimed independence from the influence of social and historical conditions Here Aronowitz asserts that the norms of science are by no means self evident and that science is best seen as a socially constructed discourse that legitimates its power by presenting itself as truth **On the Social Analysis of Science** David Wade Chambers,1984 Prepared for units HUW108 HUW208 HUX108 HUX208 Knowledge and power offered by the School of Humanities in Deakin University s Open Campus Program **Defining Science** Charles Alan Taylor,1996 The most interesting entry point to the demarcation problem in science since Popper s seminal formulation Steve Fuller Professor of Sociology Social Policy Durham University What is science What isn t science And who draws the line between them These are rhetorical concerns as Charles A Taylor demonstrates in this ambitious book about the theoretical and cultural underpinnings of scientific practice By showing how boundaries between science and nonscience are rhetorically constructed and socially enforced Defining Science reveals the political and philosophical significance of such distinctions Taylor examines the traditional demarcation problem the problem of defining the boundaries of science as an ongoing rhetorical negotiation involving a full range of historical interests and social actors from researchers and lab technicians to governmental and industrial patrons program administrators political representatives journalists and educators His case studies of the recent debates over creationism and cold fusion clearly demonstrate how the rhetorical dynamics of science operate within different fields In both cases presented here with concision and insight prevailing demarcations or defining portrayals of science emerge as far more nuanced than traditional accounts allow Taylor analyzes traditional approaches to demarcation in science in order to incorporate their insights into his larger rhetorical view His reformulation of philosophical historical and sociological accounts of science clearly illustrates the intellectual value of an interdisciplinary rhetoric of demarcation Furthermore Defining Science suggests how we as a community can positively influence future constructions of science and society This book confronts what is arguably the late twentieth century s definitive problem in a provocative and interesting way It will be of interest to anyone engaged with the question of knowledge in public life Charles Arthur Willard Professor and Chair of the Department of Communication University of Louisville **Beyond the Science Wars** Ullica Christina Olofsdotter Segerstråle,Ullica Segerstrale,2000-08-03 Contextualizes the Science Wars from interdisciplinary sociological historical scientific political and cultural perspectives Social Science as Civic Discourse Richard Harvey Brown,1989-11-16 Richard Harvey Brown s pioneering explorations in the philosophy of social science and the theory of rhetoric reach a culmination in Social Science as Civic Discourse In his earlier works he argued for a logic of discovery and explanation in social science by showing that science and art both depend on metaphoric thinking and he has applied that logic to society as a narrative text in which significant action by

moral agents is possible This new work is at once a philosophical critique of social theory and a social theoretical critique of politics Brown proposes to redirect the language and the mission of the social sciences toward a new discourse for a humane civic practice *Knowledge, Ideology, and Discourse* Tim Dant, 1991-01-01

The Sociology of Knowledge Approach to Discourse Reiner Keller, Anna-Katharina Hornidge, Wolf Schünemann, 2018-08-06 The Sociology of Knowledge Approach to Discourse SKAD has reoriented research into social forms structuration and processes of meaning construction and reality formation doing so by linking social constructivist and pragmatist approaches with post structuralist thinking in order to study discourses and create epistemological space for analysing processes of world making in culturally diverse environments SKAD is anchored in interpretive traditions of inquiry and allows for broadening and possibly overcoming of the epistemological biases and restrictions still common in theories and approaches of Western and Northern centric social sciences An innovative volume this book is exactly attentive to these empirically based globally diverse further developments of approach with a clear focus on the methodology and its implementation Thus The Sociology of Knowledge Approach to Discourse presents itself as a research program and locates the approach within the context of interpretive social sciences followed by eleven chapters on different cases from around the world that highlight certain theoretical questions and methodological challenges Presenting outstanding applications of the Sociology of Knowledge Approach to Discourse across a wide variety of substantive projects and regional contexts this text will appeal to postgraduate students and researchers interested in fields such as Discourse Studies Sociology Cultural Studies and Qualitative Methodology and Methods This book is available for free in PDF format as Open Access from the individual product page at www.routledge.com It has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license

Science and the Sociology of Knowledge Michael Mulkey, 2016-01-31 How far is scientific knowledge a product of social life In addressing this question the major contributors to the sociology of knowledge have agreed that the conclusions of science are dependent on social action only in a very special and limited sense In *Science and the Sociology of Knowledge* Michael Mulkey's first aim is to identify the philosophical assumptions which have led to this view of science as special and to present a systematic critique of the standard philosophical account of science showing that there are no valid epistemological grounds for excluding scientific knowledge from the scope of sociological analysis The rest of the book is devoted to developing a preliminary interpretation of the social creation of scientific knowledge The processes of knowledge creation are delineated through a close examination of recent case studies of scientific developments Dr Mulkey argues that knowledge is produced by means of negotiation the outcome of which depends on the participants use of social as well as technical resources The analysis also shows how cultural resources are taken over from the broader social milieu and incorporated into the body of certified knowledge and how in the political context of society at large scientists technical as well as social claims are conditioned and affected by their social position

Science as Practice and Culture Andrew Pickering, 2010-11-15 Science

as Practice and Culture explores one of the newest and most controversial developments within the rapidly changing field of science studies the move toward studying scientific practice the work of doing science and the associated move toward studying scientific culture understood as the field of resources that practice operates in and on Andrew Pickering has invited leading historians philosophers sociologists and anthropologists of science to prepare original essays for this volume The essays range over the physical and biological sciences and mathematics and are divided into two parts In part I the contributors map out a coherent set of perspectives on scientific practice and culture and relate their analyses to central topics in the philosophy of science such as realism relativism and incommensurability The essays in part II seek to delineate the study of science as practice in arguments across its borders with the sociology of scientific knowledge social epistemology and reflexive ethnography The Social Compulsions of Ideas Gerard L. DeGré, 1985
