Cross-Media Service Delivery Diomidis Spinellis, 2012-12-06 The digitisation of traditional media
formats such as text images video and sound provides us with the ability to store process and transport content in a uniform
way This has led the formerly distinct industries of media telecommunications and information technology to converge Cross
media publishing and service delivery are important new trends emerging in the content industry landscape Mass media
organizations and content providers traditionally targeted content production towards a single delivery channel However
recent economic and technological changes in the industry led content providers to extend their brands to cover multiple
delivery channels Following the content industry trend to create once and publish everywhere COPE a number of
architectures technologies and tools are currently being developed and deployed to facilitate the automatic conversion of
content to multiple formats and the creation of innovative multi platform services This new approach enables the seamless
access to information over different network infrastructures and client platforms This work aims to bring together a cross
disciplinary core of contributors to address the technical and business issues of cross media publishing and service delivery
The volume is based on papers presented at the conference on Cross Media Service Delivery CMSD 2003 that took place in
Santorini Greece in May 2003 Each contribution was reviewed by at least two reviewers typically three From the 30 papers
that were submitted 20 were selected for presentation at the conference Those were further shepherded by programme
committee members to be improved according to the review suggestions
