these services and the airports to which they are operated are loss making and require subsidies to sustain them There are therefore many more interested parties involved in both providing and deciding issues relating to the provision of air transport in these situations most especially central regional and local governments who are charged with financing these activities The book contains 17 chapters from experts in remote region air transport within the following 5 sections Key economic and socio economic issues Subvention mechanisms Route development initiatives Infrastructure provision Issues affecting the provision of air services in remoter regions      *Aircraft Technology* Melih Kushan,2018-09-12 It is well known that improvements in space and aviation are the leader of today s technology and the aircraft is the most important product of aviation Because of this fact the books on aircraft are always at the center of interest In most cases technologies designed for the aerospace industry are rapidly extending into other areas For example although composite materials are developed for the aerospace industry these materials are not often used in aircraft However composite materials are utilized significantly in many different sectors such as automotive marine and civil engineering And materials science in aviation reliability and efficiency in aircraft technology have a major importance in aircraft design
