

Bale Size Indicator

The bale size indicator is located on the upper right-hand side of the machine. The operator does not have to wait until all the letters in the word "STOP" are visible. A bale can be stopped, wrapped, and ejected anytime after it has reached 2-1/2 feet (762 mm) in diameter.

When the belt after arm has moved the bale indicator to the point that all letters in the word "STOP" are clearly visible, the bale is ready to wrap and eject.

IMPORTANT: Do not over-fill the baler. Failure to stop soon after the letter "P" is visible will result in the pickup-drive release disengaging the pickup. See page 17.

General Preparations

Before starting the baler in the field, read the "operation" section of this manual carefully and check the proper function of each control and belt adjustment. Review these instructions each year to learn what they can accomplish to meet the wide range of field conditions. This will allow you to obtain the highest satisfaction and best results possible with your baler. Check the following items before taking the baler to the field.

1. Tractor to be used meets requirements specified for use with the baler.
2. Hookup requirements conform to those noted on page 7 when baler is attached to tractor.
3. Hydraulic hoses are correctly connected and installed. (See page 8.)

4. Drive chains are tightened properly and pickup drive belt inspected.
5. Upper belts are properly tracking on the rollers.
6. Baler is adjusted for the anticipated field conditions.

Daily Inspection

Careful inspection and maintenance of the baler before starting work each day will prevent needless delays and break-downs in the field. Make the following checks and adjustments:

1. See that lower line is loaded. (See page 4.)
2. Perform the lubrication services. (See pages 22 and 23.)
3. Inspect and adjust drive chains to proper tension and alignment.
4. Check and tighten lower belts and connections.
5. Check the inflation. Correct air pressure is 28 psi (1.7 bar) (2.0 kg/cm²).
6. Remove dirt, weeds, or vines from chains, shafts, and other working components.
7. Inspect and service the tractor as recommended in your tractor operator's manual. Pay particular attention to the hydraulic system.
8. Operate the baler for several minutes; stop and check adjustments.

OPERATING ADJUSTMENTS

Adjusting Flow Control Valve

The hydraulic flow control valve (arrowed) is located on the left side of the turn control cylinder. This valve controls the movement of the turn arm to the right.
