overlooks the active role of memory and technology in our present forms of life and in the shaping of our future To overcome this static view and its dualism this book proposes a dynamic view of memory technology and culture emphasising the active and constitute role of technologies in the shaping of our forms of life and including themes unusual in memory studies such as the production of technology and the concept of nature The approach of this book is theoretical and philosophical but interdisciplinary incorporating ideas and concepts from various disciplines particularly the arts humanities and social sciences
