scheme to describe the 19 families the family T of types defines the rank of each type and emphasises the rôle of Kegel covers This part presents a unified picture of known results and is the reason why our title starts with About We then apply new ideas to prove the conjecture for the alternating groups see Page ii Thereupon we remember Kegel covers and sequences Finally we suggest a plan how to prove the conjecture step by step which leads to further conjectures thereby unifying Sylow theory in locally finite simple groups with Sylow theory in locally finite and p soluble groups In Part 3 ISBN 978 3 7578 6001 1 of the Trilogy we continue the program begun in 10 to optimise along the way 1 its Theorem about the first type A_n of infinite families of finite simple groups step by step to further types by proving it for the second type A_{PSLn} We start with proving the Conjecture 2 of 10 about the General Linear Groups by using new ideas see Page ii and then break down this insight to the Special Linear and the PSL Groups We close with suggestions for future research regarding the remaining rank unbounded types the Classical Groups and the way 2 the locally finite and p soluble groups and Augustin Louis Cauchy's and Galois contributions to Sylow theory in finite groups
