The first step in the process of scientific inquiry is to ask a question. This is often done by observing something in the world around us that we find interesting or unusual. For example, we might notice that a plant grows faster in one place than in another, or that a certain animal behaves differently in different environments. Once we have a question, we can begin to design an experiment to answer it.

After we have designed our experiment, we can begin to collect data. This is often done by making observations or taking measurements. Once we have collected our data, we can begin to analyze it and see if it supports our hypothesis.

After we have analyzed our data, we can begin to draw conclusions. This is often done by comparing our results to our hypothesis and seeing if they match. If they do, we can say that our hypothesis is supported. If they don't, we can say that our hypothesis is not supported.

Finally, we can begin to communicate our results. This is often done by writing a paper or giving a presentation. This allows other scientists to see our work and see if they agree with our conclusions.

- 1. Hypothesis: A statement that can be tested by an experiment.
- 2. Experiment: A procedure for testing a hypothesis.
- 3. Data: Information collected during an experiment.
- 4. Analysis: The process of looking at data to see if it supports a hypothesis.
- 5. Conclusion: A statement about whether the hypothesis is supported or not.
- 6. Communication: The process of sharing results with other scientists.
