- 10. **Fuse Block** - Located in the engine compartment, on the right side of the firewall, stores the fuses that protect individual circuits from damage due to excessive current.
- 11. **Coolant Temperature Sensor** - Located in the thermostat housing on the left side of the engine, warns the operator of high engine temperatures.
- 12. **Fuel Level Sender** - Located within the fuel tank, sends a signal indicating fuel level to the fuel gauge on the left side of the instrument panel.
- 13. **Instrument Panel** - Located on the dash panel, the instrument panel houses gauges and indicator lights that monitor tractor functions and warn the operator of potential problems.
- 14. **Glow Plug Indicator Light Timer** - Located in the engine compartment, on the right side of the firewall, controls current flow to the glow plug indicator light within the instrument panel. When the key switch is turned to the "START" position, the glow plug timer sends current to the glow plug indicator light for approximately two to five seconds. The glow plug timer does not control current flow to the engine glow plugs. The timer turns the indicator light off by opening the circuit to the light on the instrument panel.
- 15. **Safety (Start) Relay** - Located in the engine compartment, on the right side of the firewall, controls current flowing to the starter.
- 16. **Key Switch** - Located on the right side of the operator's console, the four-position key switch connects current flowing from the battery to the engine glow plug circuit, the starting circuit or the safe operation circuit.
- 17. **Heavy Flasher/Run Signal (Control Module)** - Located in the engine compartment, on the right side of the firewall, controls current flowing to the hazard flasher/run signal lights on the rear fenders.
- 18. **Fuel Safety Switch Timer** - Located on the left cover behind the left fender, when the tractor is running, the fuel timer creates a one-second delay before shutting off the tractor engine should the operator get off of the seat. The fuel safety switch shuts the tractor engine off by cutting the ground to the solenoid circuit in the solenoid when it turns stops current flow to the fuel shutoff solenoid. The fuel shutoff solenoid then attempts to stop fuel flowing through the fuel injectors.
