An Educator's Guide to Using Your 3 Eyes Megan R. Sweet Ed. D., 2018-11-17 Applying intellect insight and intuition to promote school wide transformation for educators through interpersonal reflection and hands on tools This is no one size fits all approach to education that provides a formula or a practical how to guide The truths found in this book are about applying research based best practices to the processes that lie outside of academia

Readers will find themselves getting out their pens and highlighters to write in the margins and apply personal reflection to the teachings. The three Is: intellect, insight, and intuition are tools for educators to find personal growth and development inside the structure of the school system so that they can promote school-wide transformation. When educators stop fighting the system and instead look inward for the answers, they will begin to see the improved student achievement and involvement they crave. Readers will walk away with greater self-awareness that will improve the classroom and educational landscape around them, improved self-appreciation that will fuel empathy in the classroom and workplace, clarity about the origin and influence of their beliefs that will help them combat negative beliefs and take advantage of positive beliefs, and better decision-making skills developed through a contemplative approach.

Science Teachers' Learning National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Teacher Advisory Council, Board on Science Education, Committee on Strengthening Science Education through a Teacher Learning Continuum, 2016-01-15. Currently, many states are adopting the Next Generation Science Standards (NGSS) or are revising their own state standards in ways that reflect the NGSS. For students and schools, the implementation of any science standards rests with teachers. For those teachers, an evolving understanding about how best to teach science represents a significant transition in the way science is currently taught in most classrooms, and it will require most science teachers to change how they teach. That change will require learning opportunities for teachers that reinforce and expand their knowledge of the major ideas and concepts in science, their familiarity with a range of instructional strategies, and the skills to implement those strategies in the classroom. Providing these kinds of learning opportunities in turn will require profound changes to current approaches to supporting teachers' learning across their careers, from their initial training to continuing professional development. A teacher's capability to improve students' scientific understanding is heavily influenced by the school and district in which they work, the community in which the school is located, and the larger professional communities to which they belong. Science Teachers Learning provides guidance for schools and districts on how best to support teachers' learning and how to implement successful programs for professional development. This report makes actionable recommendations for science teachers' learning that take a broad view of what is known about science education, how and when teachers learn, and education policies that directly and indirectly shape what teachers are able to learn and teach. The challenge of developing the expertise teachers need to implement the NGSS presents an opportunity to rethink professional learning for science teachers. Science Teachers Learning will be a valuable resource for classrooms, departments, schools, districts, and professional organizations as they move to new ways to teach science.
