*Routledge Handbook of Resilient Thermal Comfort* Fergus Nicol, Hom Bahadur Rijal, Susan Roaf, 2022-04-19 This book brings together some of the finest academics in the field to address important questions around the way in which people experience their physical environments including temperature light air quality acoustics and so forth It is of importance not only to the comfort people feel indoors but also the success of any building as an environment for its stated purpose The way in which comfort is produced and perceived has a profound effect on the energy use of a building and its resilience to the increasing dangers posed by extreme weather events and power outages caused by climate change Research on thermal comfort is particularly important not only for the health and well being of occupants but because energy used for temperature control is responsible for a large part of the total energy budget of the built environment In recent years there has been an increasing focus on the vulnerabilities of the thermal comfort system how and why are buildings failing to provide safe and agreeable thermal environments at an affordable price Achieving comfort in buildings is a complex subject that involves physics behaviour physiology energy conservation climate change and of course architecture and urban design Bringing together the related disciplines in one volume lays strong multi disciplinary foundations for new research and design directions for resilient 21st century architecture This book heralds workable solutions and emerging directions for key fields in building the resilience of

households organisations and populations in a heating world      Energy Systems and Environment Pavel

Tsvetkov,2018-09-12 This book looks at environmental aspects of energy technologies from common traditional sources in use new sources and emerging sources and technologies The objective of this book is to serve as a one stop comprehensive information resource on energy and environment topics from energy science to energy engineering to energy politics Starting with science and technology topics we link them to economics and politics showcasing interconnections between energy sources energy utilization energy conversion and sustainability under the common theme of energy and environment The book achieves its objective by offering and integrating deeply technical and socioeconomics papers together on energy and environment topics      *Eco-efficient Materials for Mitigating Building Cooling Needs* F. Pacheco-Torgal,Joao

Labrincha,Luisa F. Cabeza,Claes-Göran Granqvist,2015-02-27 Climate change is one of the most important environmental problems faced by Planet Earth The majority of CO<sub>2</sub> emissions come from burning fossil fuels for energy production and improvements in energy efficiency shows the greatest potential for any single strategy to abate global greenhouse gas GHG emissions from the energy sector Energy related emissions account for almost 80% of the EU s total greenhouse gas emissions The building sector is the largest energy user responsible for about 40% of the EU s total final energy consumption In Europe the number of installed air conditioning systems has increased 500% over the last 20 years but in that same period energy cooling needs have increased more than 20 times The increase in energy cooling needs relates to the current higher living and working standards In urban environments with low outdoor air quality the general case this means that in summer time one cannot count on natural ventilation to reduce cooling needs Do not forget the synergistic effect between heat waves and air pollution which means that outdoor air quality is worse in the summer aggravating cooling needs Over the next few years this phenomenon will become much worse because more people will live in cities more than 2 billion by 2050 and global warming will aggravate cooling needs An overview of materials to lessen the impact of urban heat islands Excellent coverage of building materials to reduce air conditioning needs Innovative products discussed such as Thermo and Electrochromic materials      **Innovations in Ventilative Cooling** Giacomo Chiesa,Maria Kolokotroni,Per

Heiselberg,2021-06-08 This book includes the most recent outcomes from research and professional practice in the ventilative cooling field gathered by the selected panel of authors It provides essential contents to face and reduce the rise of space cooling and ventilation energy uses in buildings by alternative ventilation and cooling solutions The book is organised into three parts which include a detailed description of ventilative cooling boundaries and implications working principles KPIs standards comfort models control techniques and of principal techniques night ventilation controlled natural ventilation hybrid solutions PCM and mass activation evaporative cooling earth to air heat exchangers along with an updated analysis of the background to the topic Furthermore the last part of the book defines a unique practical and theoretical framework to include ventilative cooling solutions in different building typologies along with their principal implications      **Progress in**

Running Buildings on Natural Energy Sue Roaf,Fergus Nicol,2018-12-07 New thinking is essential if we are to design and occupy buildings that can keep us safe with unpredictable economies climates energy systems and resource challenges For too long designers have relied on mechanical solutions for heating cooling and ventilating buildings The 21st century dream has to be of a better architecture that enables buildings to be run for as much of a day or year as possible on local clean reliable affordable natural energy Examples are included from different climates where the fundamental building design is right its orientation opening sizes mass and its natural ventilation systems and pathways Many modern buildings are poorly designed for climate as manifested by growing incidences of overheating experienced indoor explored here The inability of many rating systems to record and improve the climatic design of buildings raises questions about how they deal with issues of basic building performance This books points the way towards how we can understand such problems and move forward from over mechanised poorly designed buildings to a new generation of adaptable buildings designed and refurbished to run largely on natural energy and capable of evolving over time to keep their occupants safe and comfortable even in a warming world The chapters were originally published in Architectural Science Review
