Hussein, 2007-08-09 The need for this book arose from my teaching engineering and search experience in the non power aspects of nuclear technology The lack of a comprehensive textbook in industrial applications of radiation frustrated my students who had to resort to a multitude of textbooks and research publications to familiarize themselves with the fundamental and practical aspects of radiation technology As an engineer I had to acquire the design aspects of radiation devices by trial and error and often by accidental reading of a precious publication As a researcher and a supervisor of graduate students I found that the needed literature was either hard to find or too scattered and diverse More than once I discovered that what appeared to be an exciting new idea was an old concept that was tried a few decades earlier during the golden era of Atom for Peace I am hoping therefore that this book will serve as a single comprehensive reference source in a growing field that I expect will continue to expand This book is directed to both neophytes and experts and is written to combine the old and the new the basic and the advanced the simple and the complex It is anticipated that this book will be of help in vivifying older concepts improving and expanding existing techniques and promoting the development of new ones **Biomaterials and Neurodegenerative Disorders** Gaurav Kumar, Sumedha Mukherjee, Santosh Kumar, 2025-01-22 The book covers the fundamental aspects of biomaterials including their introduction types synthesis and characterization It delves into the field of neuro compatible biomaterials examining nervous tissue response and the role of biomaterials in neuroprotection It discusses clinical trials and applications along with intellectual property rights in neuroprotective biomaterials The book also explores the innovative neuro targeted drug delivery system and its potential in improving treatment outcomes Lastly it explores biomaterials impact on neurodegeneration and neuro diagnosis providing valuable insights for researchers academicians and doctoral students working in the field of Neuroscience Neuroprotection Biomaterial based Neurotherapeutics Biomaterial based Neuro diagnosis and Biomaterial

mediated drug delivery **Knowledge** Marian Adolf,Nico Stehr,2016-09-22 As we move through our modern world the phenomenon we call knowledge is always involved Whether we talk of know how technology innovation politics or education it is the concept of knowledge that ties them all together But despite its ubiquity as a modern trope we seldom encounter knowledge in itself How is it produced where does it reside and who owns it Is knowledge always beneficial will we know all there is to know at some point in the future and does knowledge really equal power This book pursues an original approach to this concept that seems to define so many aspects of modern societies It explores the topic from a distinctly sociological perspective and traces the many ways that knowledge is woven into the very fabric of modern society **Driving**

Albert,2016-01-22 Till Albert presents a machine learning based approach to harnessing information contained in big data from different media sources such as patents scientific publications or the internet He shows how this information can be used for automated maturity evaluation of yet unknown technologies Elaborate patent based indicators contain very useful information on technological aspects of maturity but lack for others such as social economic ecological or political factors The approach presented in this book is able to incorporate these other factors and provide a firm basis for robust technology maturity and speed of maturity evaluation *Beckett's Industrial Chocolate Manufacture and Use* Steve T. Beckett,Mark S. Fowler,Gregory R. Ziegler,2017-02-28 Since the publication of the first edition of Industrial Chocolate Manufacture and Use in 1988 it has become the leading technical book for the industry From the beginning it was recognised that the complexity of the chocolate industry means that no single person can be an expert in every aspect of it For example the academic view of a process such as crystallisation can be very different from that of a tempering machine operator so some topics have more than one chapter to take this into account It is also known that the biggest selling chocolate in say the USA tastes very different from that in the UK so the authors in the book were chosen from a wide variety of countries making the book truly international Each new edition is a mixture of updates rewrites and new topics In this book the new subjects include artisan or craft scale production compound chocolates and sensory This book is an essential purchase for all those involved in the

manufacture use and sale of chocolate containing products especially for confectionery and chocolate scientists engineers and technologists working both in industry and academia The new edition also boasts two new co editors Mark Fowler and Greg Ziegler both of whom have contributed chapters to previous editions of the book Mark Fowler has had a long career at Nestle UK working in Cocoa and Chocolate research and development he is retiring in 2013 Greg Ziegler is a professor in the food science department at Penn State University in the USA

Money Nico Stehr,Dustin Voss,2019-10-08 Since the publication of Georg Simmel s Philosophy of Money more than a century ago social science has primarily considered money a medium of exchange This new book treats money as a more inclusive social concept that has profoundly influenced the emergence of modern society Money is also a moral and political category It communicates prices and thus embodies innumerable evaluations and judgments of objects and services of social relationships and associations At the same time modern societies are undergoing fundamental transformations in which money assumes an ever important role while banking and financial services constitute the new primary sector of modern service economies In this book the authors trace the transformational scope of monetarization and financialization along the four classical productive forces land capital labor and knowledge and evaluate the consequences of an irrepressible urge to quantify and monetarize almost everything social What happens to a society in which the tangible products of the real economy lose their preeminent status and everything is judged purely according to its economic value The authors identify an increasing disconnect between market prices and social values with serious social political economic and environmental consequences

Global Change and Intellectual Property Agencies G. Bruce Doern,1999 Global change affects all areas of public policy and crucial aspects of governing institutions National and international intellectual property IP agencies are increasingly at the fulcrum of such change but are among the least well examined of governing and policy

realms Among the oldest agencies of government they are moving from a long era of contented obscurity to that of increasing political and economic exposure and controversy This is the first book to examine IP agencies in the context of this transformation Taking a basic institutional perspective the book examines the changes in and relationships among four national and international IP agencies the patent offices of the US UK Canada and Australia the World Intellectual Property Office the European Patent Office and the World Trade Organization Focusing on the 1990s the book traces institutional changes that centre on the core trade off in intellectual property policy between protection and dissemination of intellectual property These are examined in relation to the two broad clusters of interests that operate around the protection versus dissemination functions The former is dominated by big business and the IP professions and the latter by much more dispersed and emerging interests
