Computer-Aided Detection of Architectural Distortion in Prior Mammograms of Interval Cancer Shantanu Banik, Rangaraj Rangayyan, J.E. Leo Desautels, 2022-05-31 Architectural distortion is an important and early sign of breast cancer but because of its subtlety it is a common cause of false negative findings on screening mammograms Screening mammograms obtained prior to the detection of cancer could contain subtle signs of early stages of breast cancer in particular architectural distortion This book presents image processing and pattern recognition techniques to detect architectural distortion in prior mammograms of interval cancer cases The methods are based upon Gabor filters phase portrait analysis procedures for the analysis of the angular spread of power fractal analysis Laws texture energy measures derived from geometrically transformed regions of interest ROIs and Haralick s texture features With Gabor filters and phase portrait analysis 4 224 ROIs were automatically obtained from 106

prior mammograms of 56 interval cancer cases including 301 true positive ROIs related to architectural distortion and from 52 mammograms of 13 normal cases For each ROI the fractal dimension the entropy of the angular spread of power 10 Laws texture energy measures and Haralick's 14 texture features were computed The areas under the receiver operating characteristic ROC curves obtained using the features selected by stepwise logistic regression and the leave one image out method are 0.77 with the Bayesian classifier 0.76 with Fisher linear discriminant analysis and 0.79 with a neural network classifier Free response ROC analysis indicated sensitivities of 0.80 and 0.90 at 5.7 and 8.8 false positives FPs per image respectively with the Bayesian classifier and the leave one image out method The present study has demonstrated the ability to detect early signs of breast cancer 15 months ahead of the time of clinical diagnosis on the average for interval cancer cases with a sensitivity of 0.8 at 5.7 FP/image The presented computer aided detection techniques dedicated to accurate detection and localization of architectural distortion could lead to efficient detection of early and subtle signs of breast cancer at pre mass formation stages

Relational Psychophysics in Humans and Animals Viktor Sarris, 2007-09-12 Relational Psychophysics in Humans and Animals offers a comprehensive and integrated overview of the often fragmented field of psychophysics. It introduces key concepts in psychophysics and clearly summarises and illustrates the central issues through telling examples. It combines empirical research and theoretical approaches from general psychophysics, animal psychophysics and human infant psychophysics to create a systematic comparison of these three key areas. Throughout, Viktor Sarris makes a strong case for more comparative psychophysical research across different species and across different stages of development. He presents original research and examines frame of reference models, behavioural psychophysics, developmental psychophysics, perceptual cognitive psychophysics and evolutionary perspectives to create an integrated framework for the direction of new research. The book will be an invaluable aid for researchers in the fields of perception and psychophysics.

Bridging Reading Aloud and Speech Production Simone Sulpizio, Sachiko Kinoshita, 2016-07-25 For decades human cognition involved in reading aloud and speech production has been investigated extensively a quote search of the two in google scholar produces about 83 000 and 255 000 results respectively This large amount of research has produced quite detailed descriptions of the cognitive mechanisms that allow people to speak or to read aloud a word However despite the fact that reading aloud and speech production share some processes generation of phonology and preparation of a motor speech response the research in this two areas seems to have taken parallel and independent tracks with almost no contact between the two The present Research Topic takes an initial step towards building a bridge that will link the two research areas as we believe that such an endeavour is essential for moving forward in our understanding of how the mind brain processes words To this aim we encourage contributions exploring the relation between speech production and reading aloud The questions the Research Topic should address include but are not limited to the following To what extent are speech production and word reading reading aloud similar Are there some shared components and or mechanisms between the two process Is the time course of the supposed shared mechanisms activation similar in the two processes How does the different input conceptual vs orthographic interact with the types of information that reading and speaking share semantic and phonological knowledge articulatory codes How does a difference in the input affect the supposed common stages of processing i e phonological encoding and articulatory planning and execution We welcome any kind of contribution e g original research article review opinion that answers the above or other questions related to the Topic
