Pathophysiology of Shock, Sepsis, and Organ Failure Günther Schlag,Heinz Redl,2012-12-06 In this book current knowledge of the pathophysiology of shock sepsis and multi organ failure is presented The rapid progress which has been made and the results achieved in intensive care medicine are based on sound basic research which is duly reflected in these chapters Multiorgan failure is the foremost cause of postoperative and posttraumatic death and many complex mechanisms are involved Only with a good foundation of basic research can abnormalities in the physiological biochemical and morphological course of shock be recognized and the necessary conclusions for treatment drawn Therapy must proceed from profound knowledge of the multi variant physiological events in order to influence shock sepsis and organ failure Although numerous possibilities for therapy have arisen from pharmaceutical research in recent years they are beyond the scope of this book and are not discussed here To gain a better understanding of the pathophysiological events it was necessary to examine and to describe different models that simulate and reproduce these events Here we describe the causative agents shock and the consequences sepsis organ failure in two main sections divided on the basis of their pathophysiology

Shock, Sepsis, and Organ Failure Günther Schlag,Heinz Redl,2012-12-06 At the Sixth Wiggers Bernard Conference a group of scientists from various fields discussed new findings relating to nitric oxide synthase inhibitor in shock sepsis and organ failure This meeting was dedicated to the presentation and discussion of positive and negative findings related to the use of NOS inhibitors the issue of specific and non specific inhibitors and the role of nitric oxide oxygen radical interactions Both experimental and clinical data were presented in the trauma and sepsis field With appropriate dosing and timing the use of NOS inhibitors seems to be beneficial at least in severe sepsis situations but some inhibitors and overdosing can be potentially dangerous

Shock, Sepsis, and Organ Failure Günther Schlag,Heinz Redl,John H. Siegel,Daniel L.

Traber, 2012-12-06 The Wiggers Bernard Conferences named after two great physiologists of the past are an annual gathering of the leaders in the field of shock. The meetings focus on specific areas of which appears to be showing the most advancement during the previous year. There are several types of sessions: informal presentations during which the seminarian can be interrupted in order to clarify a particular point; formal discussions follow each presentation; these are followed by informal gatherings in which these discussions continue during meals and libation in a very relaxed environment. The 1990 meeting took place in Durnstein, Austria, a small hamlet in the wine growing area of the Wachau valley on the Danube above Vienna. This was the site of a former citadel where the English King Richard the Lion Heart, Coeur de Lion, was held for ransom during the middle ages. The frank beauty and hospitality of this area, in addition to the ancient Roman adage *in vino veritas*, acted as a catalyst to crystallize the thoughts of this interdisciplinary group of scientists as they discussed the following areas: 1. Gut as a Source of Organ Failure; 2. Metabolic Aspects of the Liver in Sepsis; 3. Endothelium as a Target in Sepsis. We would like to thank the participants of the conference for taking time away from their very productive and busy schedules to participate in the conference and for the prompt presentation of their manuscripts and editions of their discussions.
