Introduction to Mathematical Techniques in Pattern Recognition by Harry C Andrews This volume is one of the first cohesive treatments of the use of mathematics for studying interactions between various recognition environments It brings together techniques previously scattered throughout the literature and provides a concise common notation that will facilitate the understanding and comparison of the many aspects of mathematical pattern recognition The contents of this volume are divided into five interrelated subject areas Feature Selection Distribution Free Classification Statistical Classification Nonsupervised Learning and Sequential Learning Appendices describing specific aspects of feature selection and extensive reference and bibliographies are included 1972 253 pp

Threshold Logic and its Applications by Saburo Muroga This is the

first in depth exposition of threshold logic and its applications using linear programming and integer programming as optimization tools It presents threshold logic as a unified theory of conventional simple gates threshold gates and their networks This unified viewpoint explicitly reveals many important properties that were formerly concealed in the framework of conventional switching theory based essentially on and or and not gates 1971 478 pp Knowing and Guessing A Quantitative Study of Inference and Information By Satoshi Watanabe This volume presents a coherent theoretical view of a field now split into different disciplines philosophy information science cybernetics psychology electrical engineering and physics The target of investigation is the cognitive process of knowing and guessing In contrast to traditional philosophy the approach is quantitative rather than qualitative The study is formal in the sense that the author is not interested in the contents of knowledge or the physiological mechanism of the process of knowing The author s style is lucid his comments are illuminating The result is a fascinating book which will be of interest to scientists in many different fields Nature 1969 592 pp
