Motor Neuron Disease Motor Neuron Disease:

Motor Neuron Disease Ralph W. Kunc1,2002 Motor neuron disease is a neurological condition that usually begins in late life It comprises several different disorders that are characterized by degeneration and loss of motor neurons Recent advances in this area include new information on the genetic components within MND current pharmacotherapy and the multidisciplinary approach to care

Motor Neuron Disease P.N. Leigh,Michael Swash,2012-12-06 Here is the first book to provide a comprehensive overview of the clinical pathological and research aspects of motor neuron disease MND The text contains all essential features of the anatomy physiology pharmacology and toxicology of the motor system a full description of MND and its variants as well as historical developments and a review of the current concepts and controversies This book comes at a time of increasing interest in neurodegenerative disorders and MND in particular It will prove a key reference book with an integrated overview of the field and will be indispensable to practicing neurologists researchers and all those with an interest in MND

Motor Neuron Diseases Bradley James Turner,2012 Motor neuron disease MND also commonly known as amyotrophic lateral sclerosis ALS is a chronic neurodegenerative disorder of the motor system in adults characterised by the loss of motor neurons in the cortex brain stem and spinal cord This book presents current research from across the globe in the study of the causes classification and treatments of MND including membrane trafficking defects as determinants of motor neuron susceptibility and degeneration in ALS motoneuron specific calcium dysregulation and perturbed cellular calcium homeostasis in ALS and stem cells and their application in ALS treatment excitotoxicity and selective motor neuron degeneration and therapeutic intervention and assistive technology treatments

Motor Neuron Disease in Adults Mark B. Bromberg,2015 Motor Neuron Disease reviews new information from 1998 as it applies to all aspects of motor neuron disease Articles included use evidence based methods to ensure that the new information is solid and advances the topic The book can be used by anyone who provides any type of care to ALS patients

Clinical and Molecular Aspects of Motor Neuron Disease Johnathan Cooper-Knock,Thomas Jenkins,Pamela J. Shaw,2013-09-01 In this e book motor neuron disease MND shall refer to amyotrophic lateral sclerosis ALS the most common neurodegenerative disorder affecting both the upper and lower motor neurons With the discovery of C9ORF72 expansions in approximately 10% of all MND cases in certain populations we stand at the brink of a new era of MND research and hopefully treatment facilitated by the ability to associate a relatively large group of patients with a similar disease mechanism This review will summarise both current clinical management of MND and our present understanding of the molecular pathogenesis of MND Study of C9ORF72 MND has the potential to rapidly advance both of these aspects in the coming years In the first section we will discuss the clinical features of MND and describe how patients with this devastating condition present are investigated and managed in the 21st century Although currently management is limited by an incomplete understanding of disease pathophysiology there is much which can be done to assist and support patients with MND In the following sections we will

discuss molecular mechanisms implicated in MND highlighting observations which unify different theories Particular attention will be given to placing proposed mechanisms within the clinical course of MND Furthermore novel therapeutic targets will be discussed Table of Contents Clinical Aspects of MND Molecular Aspects of MND References Author Biographies Titles of Related Interest Series of Related Interest

Motor Neuron Disease Research Progress Raffaele L. Mancini, 2008 The motor neuron diseases or motor neuron diseases MND are a group of progressive neurological disorders that destroy motor neurons the cells that control voluntary muscle activity such as speaking walking breathing and swallowing Neurological examination presents specific signs associated with upper and lower motor neuron degeneration Signs of upper motor neuron damage include spasticity brisk reflexes and the Babinski sign Signs of lower motor neuron damage include weakness and muscle atrophy Every muscle group in the body requires both upper and lower motor neurons to function It is a common misconception that upper motor neurons control the arms while lower motor neurons control the legs The signs described above can occur in any muscle group including the arms legs torso and bulbar region Symptoms usually present between the ages of 50 70 and include progressive weakness muscle wasting and muscle fasciculations spasticity or stiffness in the arms and legs and overactive tendon reflexes Patients may present with symptoms as diverse as a dragging foot unilateral muscle wasting in the hands or slurred speech This new book presents the latest research from around the globe

 Love, David Louis, David W. Ellison, 2008-02-29 Greenfield's Neuropathology, the world's leading neuropathology reference,
 provides an authoritative, comprehensive account of the pathological findings in neurological disease, their biological basis,
 and their clinical manifestations. This account is underpinned throughout by a clear description of the molecular and cellular
 processes and reactions that are relevant to the development and normal and abnormal functioning of the nervous system.
 While this scientific content is of paramount importance, however, care has been taken to ensure that the information is
 presented in a way that is accessible to readers working within a range of disciplines in the clinical neurosciences, and that
 also places the neuropathological findings within the context of a broader diagnostic process. The new eighth edition
 incorporates much new information, new illustrations, and many new authors, while retaining the depth, breadth, and quality of
 content so praised in previous editions. Each chapter opens with an introductory section designed to offer an integrated
 approach to diagnosis, taking account of clinical manifestations, neuroradiological and laboratory findings, as well as the
 neuropathological and molecular genetic features of the diseases being considered. Strong emphasis has been placed on
 facilitating the retrieval of neuropathological information by non-neuropathologists grappling with differential diagnoses, or
 seeking information on broad categories of neurological disease, and boxes and tables are used to present important
 symptoms and signs, patterns of disease, and other features for ease of reference. High-quality line and photographic
 illustrations, the majority in full colour, are all available on a companion CD to complete the offering.
