Advanced Micro- and Nanomaterials for Photovoltaics, 2019-05-25
Nanomaterials are becoming increasingly important photovoltaic technologies from absorbers to contacts This book is dedicated to describing the novel materials and technologies for photovoltaics that derive from these new and novel approaches in solar technologies We have collected a set of renowned experts in their respective fields as authors and their expertise covers a broad set of areas including novel oxides quantum dots CZTS and organic solar cells as well as light management and reliability testing The organization of the book is divided into three sections the first part deals with emerging photovoltaic absorbers and absorber approaches the second part is focused on novel solar cell architectures and device concepts and components and the last part is focused on their integration into module technologies The first chapter is an introduction to the basics of solar cells technology facilitating an understanding by the non expert of the following chapters The book is intended for academics and professionals at the research and R D level in materials and devices who are looking for opportunities for applications in the solar materials devices and modules areas Hopefully it will serve as a reference for students and professionals looking into the potential and development of novel photovoltaic technologies researchers looking into the development of innovative projects and teachers in the field of energy and sustainability Showcases a range of cutting edge photovoltaic materials and devices exploring their special properties and how they are best used Assesses the challenges of fabricating solar cell devices using nanotechnology Explores how producing cheaper modules increasing reliability and increasing efficiency have led to new applications for photovoltaic devices

Crashworthiness of Motor Vehicles: a Bibliography L. Flynn (comp), 1978 **Foundation Engineering Handbook** Hsai-Yang Fang, 2013-06-29 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits

new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction
