Mountain Environments An Examination Of The Physical Geography Of Mountains:

Mountain Environments John Gerrard, 1990 Using examples chosen from a variety of geographical settings and scales A J Gerrard presents a novel approach to the study of mountain environments He provides a framework in which mountains as special environments can be studied and shows how no matter what their location or origin all mountain regions share common characteristics and undergo similar shaping processes Gerrard s integrated approach combines ecological climatological hydrological volcanic and environmental management concerns in a systematic treatment of mountain geomorphology He begins by examining the special nature of mountains including a new classification of mountain types He discusses mountain ecosystems stressing the interaction between biota soil climate relief and geology examines the high energy systems of weathering and mass movement and analyzes the role of rivers and hydrology and the processes of slope evolution Two chapters are devoted to the particular characteristics of glaciation and vulcanism in mountain formation The book concludes with a discussion of the special problems that human use of mountain regions create including engineering natural hazards soil erosion and the concept of integrated development A J Gerrard is Lecturer in Geography at the University of Birmingham England **Mountain Environments** A. Mountain Environments Romola Parish, 2014-06-03 This book breaks the ground in Geographical texts by transcending a strictly regional or topical focus It presents the opportunities and constraints that mountains and their resources offer to local and global populations the impacts of environmental and economic change development and globalisation on mountain environments Part of the Ecogeography series edited by Richard Hugget **Mediterranean Mountain Environments** Ioannis Vogiatzakis, 2012-07-02 Mediterranean mountains exhibit many similarities in their biotic ecological physical and environmental characteristics There are also many differences in terms of their human colonization pattern historic land uses and current anthropogenic pressures This book provides an introduction to these environments of mountainous areas in the Mediterranean and their changes in time and space in relation to both natural and cultural factors Mediterranean Mountain Environments places its emphasis on physical geography while adopting an integrated approach to the whole subject area The book draws examples from a wide range of environments demonstrating the interaction between human and physical processes responsible for shaping mountain areas Risks and conflicts as well as methods and tools for the conservation and management of both the natural and cultural environment are covered in the light of future challenges for the sustainable development of the Mediterranean mountains Emphasis on both mainland and island mountain ranges Combines natural and cultural approach in the topic Integrated approach facing future challenges based on the study and understanding of the historical processes that have shaped the Mediterranean mountains Key references at the end of each chapter

MOUNTAIN GEOMORPHOLOGY Phil Owens, Olav Slaymaker, 2014-02-04 Mountains represent one of the most inspiring and attractive natural features on the surface of the earth. Visually they dominate the landscape. However, the increasing realization of the fragility of mountain areas because of changes in land use management and climate combined with an understanding of their importance for water and other natural resources has resulted in a growing interest in mountain environments in recent years. Hence Mountain Geomorphology represents a timely and unique contribution to the literature. Written by a team of international experts, this book is divided into three sections which consider historical, functional and applied mountain geomorphology from both global and local perspectives. Historical mountain geomorphology focuses on the evolution of landforms. Functional mountain geomorphology emphasises the interaction between processes and landforms, while applied mountain geomorphology concerns the interrelationships between geomorphological processes and society. Mountain Geomorphology is a valuable source of information for students studying mountain geomorphology and also for academics and research scientists interested in mountain environments.

Contains chapters on drainage basins, channel processes, channel biota and human impact. Includes bandw photos. Of interest to hydrologists, geomorphologists, civil and environmental engineers and resource planners. Geocology: An Evolutionary Approach Richard Huggett, 2002-09-11 Animals, plants and soils interact with one another with the terrestrial spheres and with the rest of the Cosmos. On land, this rich interaction creates landscape systems or geoecosystems. Geocology investigates the structure and function of geoecosystems, their components and their environment. The author develops a simple dynamic systems model, the brash equation, to form the conceptual framework for the book, suggesting an ecological and evolutionary approach. Exploring internal ecological interactions between geoecosystems and their near-surface environments, the atmosphere, hydrosphere, toposphere and lithosphere, and external influences, both geological and cosmic. Geocology presents geoecosystems as dynamic entities constantly responding to changes within themselves and their surroundings. An evolutionary view emerges of geoeological systems and the animals, plants and soils comprising them.

Mining in the Himalayas A.K. Soni, 2016-09-19 Himalaya the world s most prominent mountain system of the world is a source of sustenance for the social cultural and economic development of population across different countries Unscientific small scale mining for harnessing resources including minerals has caused ecosystem damage Therefore an integrated and holistic approach to deal with the resource management is required This book makes a focussed effort to explain how mining in the Himalaya is practiced with discussions pertaining to critiques and lacunas of mining and environmental practices Status of mining practices in Himalaya is included along with the legal environmental repercussions of mining
