Nondestructive Testing of Materials and Structures Oral Büyüköztürk, Mehmet Ali Taşdemir, 2012-09-09 Condition assessment and characterization of materials and structures by means of nondestructive testing NDT methods is a priority need around the world to meet the challenges associated with the durability maintenance rehabilitation retrofitting renewal and health monitoring of new and existing infrastructures including historic monuments Numerous NDT methods that make use of certain components of the electromagnetic and acoustic spectrum are currently in use to this effect with various levels of success and there is an intensive worldwide research effort aimed at improving the existing methods and developing new ones The knowledge and information compiled in this book captures the current state of the art in NDT methods and their application to civil and other engineering materials and structures Critical reviews and advanced interdisciplinary discussions by world renowned researchers point to the capabilities and limitations of the currently used NDT methods and shed light on current and future research directions to overcome the challenges in their development and practical use In this respect the contents of this book will equally benefit practicing engineers and researchers who take part in characterization assessment and health monitoring of materials and structures

**Non-destructive Testing of Materials in Civil Engineering** Krzysztof Schabowicz, 2019-11-19 This book was proposed and organized as a means to present recent developments in the field of nondestructive testing of materials in civil engineering For this reason the articles highlighted in this editorial relate to different aspects of nondestructive testing of different materials in civil engineering from building materials to building structures The current trend in the development of nondestructive testing of materials in civil engineering is mainly concerned with the detection of flaws and defects in concrete elements and structures and acoustic methods predominate in this field As in medicine the trend is towards designing test equipment that allows one to obtain a picture of the inside of the tested element and materials From this point of view interesting results with significance for building practices have been obtained

**Strength and Related Properties of Concrete** Sándor Popovics, 1998-03-23 This work discusses the variations that occur in the strength of concrete and presents numerical methods useful in interpreting these variations Individual chapters include the relationship between composition and strength of concrete

*Developments in fiber-reinforced polymer (FRP) composites for civil engineering* O.

Gunes, 2013-05-15 Fiber reinforced polymer FRP composite materials have been increasingly used in civil engineering

applications in the past two decades Their wide ranging use however is still not realized due to a few fundamental issues including high material costs relatively short history of applications and the gaps in the development of established standards Design safety requires that all possible modes and mechanisms of failure are identified characterized and accounted for in the design procedures This chapter provides a review of the failure types encountered in structural engineering applications of FRP and the preventive methods and strategies that have been developed to eliminate or delay such failures As part of preventive measures various non destructive testing NDT and structural health monitoring SHM methods used for monitoring FRP applications are discussed with illustrative examples
