Improving Import Food Safety Wayne Ellefson, Lorna Zach, Darryl Sullivan, 2012-10-22 Food safety has been a global concern for many years While global sourcing of foods and ingredients provides great opportunity for variety and diversity of cultural products there are significant risks Programs that regulate food safety and quality in countries around the world vary in their scope and effectiveness with many being underfunded Rapidly developing countries may lack the expertise laboratory resources for testing and established inspection programs to adequately promote the safety of foods Rather these countries may be more

focused on providing enough food for their citizens Lack of documentation or traceability in the exporting country can further exacerbate the situation Of course safety problems in food imported from more developed countries also occur and the source of food borne disease outbreaks are found regularly within the United States Improving Import Food Safety gathers together vital information on the food safety programs of national governments the food industry and the testing industry Chapters have been contributed by authors from the United States Latin America Europe and Asia Readers will learn about a variety of regulatory approaches to food safety at the federal and state levels in the United States as well as in selected countries and within the food industry itself They will also gain insights into the nature and source of safety problems in addition to approaches to food safety around the world The book is divided into three sections Highlighting Key Issues authors illustrate the millions of permutations for the origin of ingredients discussing the difficulty of policing imports providing a unique perspective on the economic situation in China and insight into development of support for small farm producers in Mexico Legal and Regulatory Issues Structures in the USA and Abroad describes the legal and regulatory system in the European Union the United States and China plus a chapter addressing global approaches to fraud Potential Strategies to Improve Import Safety presents strategies to deal with what are ultimately global issues but on multiple levels Perspectives are provided by authors from Industry and industry trade association academia and a recently semi retired global ambassador or food safety Readers will find this book noteworthy because of the diverse topics and perspectives offered on the challenges of keeping food safe in a global economy Authors come from a variety of backgrounds and each has provided a unique perspective on this critical topic The volume is aimed at importers and exporters of food and ingredients food microbiologists food safety and QC QA personnel regulatory and legal personnel in food manufacturing companies food policy makers and regulatory officials and faculty and graduate students in food science

Food Industry Design, Technology and Innovation Helmut Traitler, Birgit Coleman, Karen Hofmann, 2014-11-17 Food products have always been designed but usually not consciously Even when design has been part of the process it has often been restricted to considerations of packaging logos fonts and colors But now design is impacting more dramatically on the complex web that makes up our food supply and beginning to make it better Ways of thinking about design have broad applications and are becoming central to how companies compete To succeed food designers need to understand consumers and envision what they want and to use technology and systems to show they can deliver what has been envisioned They also need to understand organizations in order to make innovation happen in a corporation The authors of this book argue that design has been grossly underestimated in the food industry The role of design in relation to technology of every kind materials mechanics ingredients conversion transformation etc is described discussed challenged and put into proper perspective The authors deftly analyze and synthesize complex concepts inspiring new ideas and practices through real world examples The second part of the book emphasizes the role of innovation and how the elements described and discussed in the first parts

design technology business must join forces in order to drive valuable innovation in complex organizations such as large and not so large food companies Ultimately this groundbreaking book champions the implementation of a design role in defining and executing business strategies and business processes Not only are designers tremendously important to the present and future successes of food corporations but they should play an active and decisive role at the executive board level of any food company that strives for greater success Packaging for Nonthermal Processing of Food Melvin A. Pascall,Jung H.

Han,2018-02-19 A comprehensive review of the many new developments in the growing food processing and packaging field Revised and updated for the first time in a decade this book discusses packaging implications for recent nonthermal processing technologies and mild food preservation such as high pressure processing irradiation pulsed electric fields microwave sterilization and other hurdle technologies It reviews typical nonthermal processes the characteristics of food products after nonthermal treatments and packaging parameters to preserve the quality and enhance the safety of the products In addition the critical role played by packaging materials during the development of a new nonthermal processed product and how the package is used to make the product attractive to consumers is discussed Packaging for Nonthermal Processing of Food Second Edition provides up to date assessments of consumer attitudes to nonthermal processes and novel packaging both in the U S and Europe It offers a brand new chapter covering smart packaging including thermal microbial chemical and light sensing biosensors radio frequency identification systems and self heating and cooling packaging There is also a new chapter providing an overview of packaging laws and regulations in the United States and Europe Covers the packaging types required for all major nonthermal technologies including high pressure processing pulsed electric field irradiation ohmic heating and others Features a brand new chapter on smart packaging including biosensors thermal microbial chemical and light sensing radio frequency identification systems and self heating and cooling packaging Additional chapters look at the current regulatory scene in the U S and Europe as well as consumer attitudes to these novel technologies Editors and contributors bring a valuable mix of industry and research experience Packaging for Nonthermal Processing of Food Second Edition offers many benefits to the food industry by providing practical information on the relationship between new processes and packaging materials to academia as a source of fundamental knowledge about packaging science and to regulatory agencies as an avenue for acquiring a deeper understanding of the packaging requirements for new processes Organic Meat Production and Processing Steven C.
