C. E. Harris, 2000 An extensive experimental database has been assembled from very detailed teardown examinations of fatigue cracks found in rivet holes of fuselage structural components Based on this experimental database a comprehensive analysis methodology was developed to predict the onset of widespread fatigue damage in lap joints of fuselage structure Several computer codes were developed with specialized capabilities to conduct the various analyses that make up the comprehensive methodology Over the past several years the authors have interrogated various aspects of the analysis methods to determine the degree of computational rigor required to produce numerical predictions with acceptable engineering accuracy This study led to the formulation of a practical engineering approach to predicting fatigue crack growth in riveted lap joints This paper describes the practical engineering approach and compares predictions with the results from several experimental studies      *NASA Conference Publication* ,1980      Timber Engineering Sven Thelandersson, Hans J.
