Nonstate Actors In International Politics Phillip Taylor, 2019-03-01 One of the most notable trends in the study of international relations is the resurgence of interest in international organizations particularly those outside the United Nations Regional international governmental organizations multinational corporations international labor unions and transnational ethnic groups have become increasingly salient actors in world politics OPEC NATO EEC and PLO for example are all widely understood acronyms and even a casual review of the crises in Iran and Afghanistan reveals the pervasive involvement of NATO the European Community the Islamic Conference the International Olympic Committee and more than one hundred other international

governmental and nongovernmental organizations Although international organizations are not likely to replace nation states as the primary actors in world politics their growing involvement in global political and economic issues challenges the assumptions of the traditionalists state centric model as well as those whose interests begin and end with the United Nations This book goes beyond the traditional UN focused studies of nonstate actors to provide students with a comprehensive analytical survey of the many other organizations that help shape today s events A common framework is used to examine what each nonstate actor does how it organizes to achieve its ends and how it makes multilateral international decisions The degree of integration in each nonstate actor is evaluated

Heterarchy in World Politics Philip G. Cerny, 2022-12-30 Heterarchy in World Politics challenges the fundamental framing of international relations and world politics IR theory has always been dominated by the presumption that world politics is at its core a system of states However this has always been problematic challengeable time bound and increasingly anachronistic In the 21st century world politics is becoming increasingly multi nodal and characterized by heterarchy the coexistence and conflict between differently structured micro and meso quasi hierarchies that compete and overlap not only across borders but also across economic financial sectors and social groupings Thinking about international order in terms of heterarchy is a paradigm shift away from the mainstream competing paradigms of realism liberalism and constructivism This book explores how since the mid 20th century the dialectic of globalization and fragmentation has caught states and the interstate system in the complex evolutionary process toward heterarchy These heterarchical institutions and processes are characterized by increasing autonomy and special interest capture The process of heterarchy empowers strategically situated agents especially agents with substantial autonomous resources and in particular economic resources in multi nodal competing institutions with overlapping jurisdictions The result is the decreasing capacity of macro states to control both domestic and transnational political economic processes In this book the authors demonstrate that this is not a simple breakdown of states and the states system it is in fact the early stages of a structural evolution of world politics This book will interest students scholars and researchers of international relations theory It will also have significant appeal in the fields of world politics security studies war studies peace studies global governance studies political science political economy political power studies and the social sciences more generally

Rethinking Authority in Global Climate Governance Thomas

Hickmann,2015-10-16 In the past few years numerous authors have highlighted the emergence of transnational climate initiatives such as city networks private certification schemes and business self regulation in the policy domain of climate change While these transnational governance arrangements can surely contribute to solving the problem of climate change their development by different types of sub and non state actors does not imply a weakening of the intergovernmental level On the contrary many transnational climate initiatives use the international climate regime as a point of reference and have adopted various rules and procedures from international agreements Rethinking Authority in Global Climate Governance puts forward this argument and expands upon it using case studies which suggest that the effective operation of transnational climate initiatives strongly relies on the existence of an international regulatory framework created by nation states Thus this book emphasizes the centrality of the intergovernmental process clustered around the United Nations Framework Convention on Climate Change UNFCCC and underscores that multilateral treaty making continues to be more important than many scholars and policy makers suppose This book will be of great interest to students and scholars of global environmental politics climate change and sustainable development
